Discovering Statistics Using R Andy Field, Jeremy Miles, Zoë Field, 2012-03-07 Keeping the uniquely humorous and self deprecating style that has made students across the world fall in love with Andy Field's books *Discovering Statistics Using R* takes students on a journey of statistical discovery using R a free flexible and dynamically changing software tool for data analysis that is becoming increasingly popular across the social and behavioural sciences throughout the world The journey begins by explaining basic statistical and research concepts before a guided tour of the R software environment Next you discover the importance of exploring and graphing data before moving onto statistical tests that are the foundations of the rest of the book for example correlation and regression You will then stride confidently into intermediate level analyses such as ANOVA before ending your journey with advanced techniques such as MANOVA and multilevel models Although there is enough theory to help you gain the necessary conceptual understanding of what you're doing the emphasis is on applying what you learn to playful and real world examples that should make the experience more fun than you might expect Like its sister textbooks *Discovering Statistics Using R* is written in an irreverent style and follows the same ground breaking structure and pedagogical approach The core material is augmented by a cast of characters to help the reader on their way together with hundreds of examples self assessment tests to consolidate knowledge and additional website material for those wanting to learn more Given this book's accessibility fun spirit and use of bizarre real world research it should be essential for anyone wanting to learn about statistics using the freely available R software

In the first comprehensive textbook on regression modeling for linguistic data in a frequentist framework Morgan Sonderegger provides graduate students and researchers with an incisive conceptual overview along with worked examples that teach practical skills for realistic data analysis The book features extensive treatment of mixed effects regression models the most widely used statistical method for analyzing linguistic data Sonderegger begins with preliminaries to regression modeling assumptions inferential statistics hypothesis testing power and other errors He then covers regression models for non clustered data linear regression model selection and validation logistic regression and applied topics such as contrast coding and nonlinear effects The last three chapters discuss regression models for clustered data linear and logistic mixed effects models as well as model predictions convergence and model selection The book s focused scope and practical emphasis will equip readers to implement these methods and understand how they are used in current work The only advanced discussion of modeling for linguists Uses R throughout in practical examples using real datasets Extensive treatment of mixed effects regression models Contains detailed clear guidance on reporting models Equal emphasis on observational data and data from controlled experiments Suitable for graduate students and researchers with computational interests across linguistics and cognitive science

Doing Better Statistics in Human-Computer Interaction Paul Cairns,2019-02-07 Each chapter of this book covers specific topics in statistical analysis such as robust alternatives to t tests or how to develop a questionnaire They also address particular questions on these topics which are commonly asked by human computer interaction HCI researchers when planning or completing the analysis of their data The book presents the current best practice in statistics drawing on the state of the art literature that is rarely presented in HCI This is achieved by providing strong arguments that support good statistical analysis without relying on mathematical explanations It additionally offers some philosophical underpinnings for statistics so that readers can see how statistics fit with experimental design and the fundamental goal of discovering new HCI knowledge

The Theory and Practice of Experimental Philosophy Justin Sytsma,Jonathan Livengood,2015-11-27 In recent years developments in experimental philosophy have led many thinkers to reconsider their central assumptions and methods It is not enough to speculate and introspect from the armchair philosophers must subject their claims to scientific scrutiny looking at evidence and in some cases conducting new empirical research The Theory and Practice of Experimental Philosophy is an introduction and guide to the systematic collection and analysis of empirical data in academic philosophy This book serves two purposes first it examines the theory behind χ^2 including its underlying motivations and the objections that have been leveled against it Second the book offers a practical guide for those interested in doing experimental philosophy detailing how to design implement and analyze empirical studies Thus the book explains the reasoning behind χ^2 and provides tools to help readers become experimental philosophers

Maltese Przemyslaw Turek,Julia Nintemann,2022-04-04 This volume features nine articles covering various aspects of Maltese linguistics Part I mostly dedicated to the Maltese lexicon opens with Bednarowicz s comparison of Maltese

and Arabic adjectives Fabri then categorizes various types of constructions involving the preposition *ta* of The paper by Lucas and Spagnol discusses Maltese words containing an innovative final *n* Part II deals with the syntax of Maltese Azzopardi's paper focuses on a construction in Maltese which consists of a sequence of two or more finite verbs Just and Pl present the first corpus based study of differential object indexing in Maltese In Part III on morphosyntax Turek analyzes Arabic prepositions in Classical Modern Standard Arabic and Arabic dialects and contrasts them with their Maltese equivalents Stolz and Vorholt then analyze the structural and functional similarities and differences of spatial interrogatives in Maltese and Spanish Vorholt then investigates the adpositions of sixteen European languages including Maltese and examines the relationship between length and frequency The volume is closed with Part IV on phonology and Avram's paper in which the diachrony of voicing assimilation in consonant clusters is reconstructed Null Subjects in Englishes Verena

Schröter, 2019-09-02 This book presents the first systematic quantitative study of null subjects not only in British English but also in the contact varieties Indian Hong Kong and Singapore English Analysing informal spoken language it addresses issues relevant for language contact and World Englishes corpus linguistics and variationist sociolinguistics linguistic typology and syntax Perspectives on information structure in Austronesian languages Sonja Riesberg, Asako Shiohara, Atsuko Utsumi

, 2018 Information structure is a relatively new field to linguistics and has only recently been studied for smaller and less described languages This book is the first of its kind that brings together contributions on information structure in Austronesian languages Current approaches from formal semantics discourse studies and intonational phonology are brought together with language specific and cross linguistic expertise of Austronesian languages The 13 chapters in this volume cover all subgroups of the large Austronesian family including Formosan Central Malayo Polynesian South Halmahera West New Guinea and Oceanic The major focus though lies on Western Malayo Polynesian languages Some chapters investigate two of the largest languages in the region Tagalog and different varieties of Malay others study information structural phenomena in small underdescribed languages The three overarching topics that are covered in this book are NP marking and reference tracking devices syntactic structures and information structural categories and the interaction of information structure and prosody Various data types build the basis for the different studies compiled in this book Some chapters investigate written texts such as modern novels cf Djenar's chapter on modern standard Indonesian or compare different text genres such as for example oral narratives and translations of biblical narratives cf De Busser's chapter on Bunun Most contributions however study natural spoken speech and make use of spoken corpora which have been compiled by the authors themselves The volume comprises a number of different methods and theoretical frameworks Two chapters make use of the Question Under Discussion approach developed in formal semantics cf the chapters by Latrouite Shiohara Riester Riesberg et al apply the recently developed method of Rapid Prosody Transcription RPT to investigate native speakers' perception of prosodic prominences and boundaries in Papuan Malay Other papers discuss theoretical consequences of their

findings Thus for example Himmelman takes apart the most widespread framework for intonational phonology ToBI and argues that the analysis of Indonesian languages requires much simpler assumptions than the ones underlying the standard model Arka Sedeng ask the question how fine grained information structure space should be conceptualized and modelled e g in LFG Schnell argues that elements that could be analysed as topic and focus categories should better be described in terms of packaging and do not necessarily reflect any pragmatic roles in the first place

Translanguaging and the Bilingual Brain Nina Dumrukic, 2022-04-19 Multilingual classrooms and online communication are becoming increasingly linguistically diverse due to globalization and new discourse patterns are emerging Many of these patterns include the use of linguistic resources from multiple languages in the same utterance Translanguaging a recent theoretical framework is gaining prominence among scholars interested in studying these multilingual discursive practices and the concept of a unitary language system for lexical processing The aim of this book is to gain a better understanding of the bilingual brain and how words and sentences that use features from socially distinct languages are processed Using examples provided by multilingual study participants a categorization of the various forms of translanguaging is developed to build a translanguaging model Psycholinguistic methods such as eye tracking are combined with conventional sociolinguistic survey methodology to provide rich qualitative and quantitative data that address the cognitive effects of translanguaging and the underlying structure of translingual word formations This monograph shows how language biography exposure and attitude towards multilingual discursive practices all affect cognitive processing It also demonstrates how multilingual speakers are setting the patterns for novel word formations to be produced thus having a social cultural and cognitive impact on how we communicate

Immigrant Englishes Around the World Erik R. Thomas, 2025-08-29 Immigrant Englishes Around the World is a collection that explores the varieties of English that emerge when speakers whose native languages are not English immigrate to an English speaking country The book examines the commonalities and diversity of immigrant varieties of English that may be seen from a comparison of groups with different heritage languages in different English speaking nations around the world Written by established researchers who all have conducted work with communities of immigrants or their descendants the chapters explore immigrant Englishes across Great Britain Australia South Africa and North America Covering the theoretical grounding that unifies immigrant Englishes across the globe and using a model that is designed specifically for immigrant groups the book focusses on how the communities as a whole develop their own distinctive ways of speaking English This comprehensive comparison of immigrant dialects across the English speaking world is essential reading for advanced students and researchers of sociolinguistics language and migration and language variation
