Immunological and Environmental Studies On Giardia Duodenalis Alyaa Farid, Azza El Amir, 2015-12-07 *Giardia duodenalis* synonyms *G lamblia* or *G intestinalis* the only species belonging to the genus *Giardia* found in humans is a pathogenic protozoan with a worldwide distribution having a more relevant prevalence in warm climate and in children *G duodenalis* is a water borne flagellated parasite that causes giardiasis in humans In addition giardiasis affects domestic and wild mammals e g cats dogs cattle deer and beavers Thompson 2000 Host to host transference of *Giardia* cysts takes place via the fecal oral route This allows the protozoan to infect the next generation of hosts through a diverse range of mechanisms person to person animal to human or by contact with contaminated water and food Outbreaks commonly occur in areas with inadequate water treatment especially developing countries where infection rates can be higher than 50% of the total population It is well documented that in developing countries infections are associated with poor sanitary conditions poor water quality and overcrowding *Giardia* is one of the leading protozoan causes of gastrointestinal illness worldwide and has joined the ranks of the WHO Neglected Diseases Initiative Giardiasis constitutes an important public health problem in Egyptian children Contamination of the Nile River with fecal materials including viruses and pathogenic protozoa still represents an environmental health hazard in Egypt especially in rural areas The clinical features of giardiasis range from acute or chronic diarrhea abdominal pain nausea flatulence vomiting weight loss to absence of symptoms and signs In the diagnosis of *Giardia* stool examination is the traditional safest and easiest method Microscopy of

Giardia cysts and trophozoites is more straightforward and there is little risk of confusion with other parasites. Moreover, only ghost cysts with an empty appearance are sometimes not recognized as Giardia parasites. However, the sensitivity of microscopy is quite low due to the intermittent excretion of Giardia cysts; the microscopical examination of a single stool specimen has a low sensitivity and may therefore miss up to 50% of Giardia infections. And thus it is recommended that at least three samples be examined in order to rule out giardiasis, which is time consuming and delays the diagnosis.

Good Hygiene Practices and Their Prevention of Biofilms in the Food Industry Roy Fink, 2019-07-12 This book highlights the importance of hygiene in the food industry with regard to biofilms which can be found on the contact materials of various food production facilities including bakery, brewing, seafood processing and dairy and meat processing. Good hygiene practices in such facilities can prevent microbial niches and harbourage sites, facilitate cleaning and disinfection, maintain or increase product shelf life and improve food safety. This book provides essential information on the updated information on biofilm growth conditions, detection methods and prevention and control strategies.

Why Did God Create Viruses, Bacteria, and Other Pathogens? Jerry Bergman, James Hoff, 2023-05-23 The question "Why did God create viruses, bacteria, pathogens, venomous creatures and poisonous chemicals" is usually asked by irreligious skeptics to challenge God's authority, design and goodness. It is also asked by those of faith either out of innocent ignorance or curiosity. Life per se is a balance of life forms co-existing because they were created by God by means of obvious intelligent design. The authors show the vast majority of bacteria, viruses and insects are beneficial. The reason some pathogens are harmful is discussed in some detail. Furthermore, the role of toxic chemicals which are beneficial and even essential to human and animal life at low to moderate concentrations is also covered. The authors' conclusions are well documented by several hundred peer-reviewed scholarly articles and books. If you have ever wondered about why in God's creation there are parasites and pathogens, ticks and toxins, maladies and mosquitoes, then you owe it to yourself to consider the scholarly explanations that set the record straight: the professional perspective of Bergman and Hoff. If you are looking for sound scientific answers to the question "Why did God create life forms that have harmful side effects to other organisms," this is the book to read.

Urban Regeneration & Sustainability C.A. Brebbia, A. Galiano-Garrigos, 2016-12-28 Including papers presented at the 11th International Conference on Urban Regeneration and Sustainability held in Alicante, Spain, this book addresses the multidisciplinary aspects of urban planning. A result of the increasing size of cities, the amount of resources and services required and the complexity of modern society, most of the earth's population live in cities and the process of urbanisation continues, generating problems originating from the drift of the population towards them. These problems can be resolved by cities becoming efficient habitats, saving resources in a way that improves the standard of living. The process faces a number of challenges related to reducing pollution, improving main transportation and infrastructure systems, and these challenges can contribute to the development of social and economic imbalances and require the development of new solutions. Large cities are probably the most complex

mechanisms to manage nevertheless they represent a productive ground for architects engineers city planners social and political scientists able to conceive new ideas and time them according to technological advances and human requirements The papers in this book cover such topics as Appropriate technologies for smart cities Architectural issues Case studies sustainable practices Cultural quarters and interventions Disaster and emergency response Eco town planning Environmental management Landscape planning and design Planning for resilience Quality of life Socio economic and political considerations Pedestrians behaviour in different situation of traffic modelling and safety Sustainable urban regeneration and public space City and beach Sustainability and the built environment Sustainable energy and the city The community and the city Transportation Urban conservation and regeneration Urban development and management Urban infrastructure Urban metabolism Urban planning and design Urban safety and security Urban strategies Waterfront development
