Module Thirteen - Fare Management Gary L Parker,2024-08-10 The primary fare management objective of passenger carriers is to match a competitor s fare This is based on the premise that in a capital and asset intensive industry the marginal cost of adding passengers is very low and hence the focus is to protect and retain market share and pay down fixed costs Consequently a carrier s fare actions are mostly reactive Fare changes could be classified into two groups regional or system wide fare changes and market specific changes The former consists mainly of sales and general increases on all fares Sales are always matched except when an existing sale provides a better incentive to the public than the new one Market specific fare changes are typically triggered by a single carrier based on the carrier s perceived dominance in a market or based on schedule related service changes in the market When a fare action is triggered by a carrier other carriers typically respond with an identical response to protect market share regardless of the revenue impacts Sometimes the reaction ripples through other markets or differs from the original change inducing a series of cascading changes This behaviour of reactive fare response is consistent with the desire of most passenger transportation executives to retain and protect market share Research dating back to the nineteenth century confirms that price matching in the competitive marketplace can be an optimal strategy In this module we begin by looking at latency in the price planning and execution process We describe fare dimensions fare types and the classification of fare products along with usage rules and purchase restrictions The second

part introduces the fare management process The next section is on how fare management impacts revenue management

World Sustainable Development Outlook 2007 Allam Ahmed,2017-09-29 The World Sustainable Development Outlook series has been developed to provide an overview of sustainable development to discuss why it is important and to provoke forward thinking on the development of a more coherent approach to solving global problems related to sustainability through science and technology In doing so a holistic approach is used to critically examine the interrelationship between the natural governmental economic and social dimensions of our world and how science and technology can contribute to solutions This is a truly global source book which is reflected in the varied national and cultural origins of the contributors as well as the topics and case studies covered Each year a different theme will be covered The theme of *World Sustainable Development Outlook 2007* is the different dimensions of knowledge and technology management in the new era of information revolution and how they relate to sustainable

development Rapid innovation in information and communication technologies ICTs is clearly reshaping the world we live in Countries are increasingly judged by whether they are information rich or information poor It is estimated that 30 40% of the world s economic growth and 40 50% of all new jobs will be IT driven Education and knowledge are the chief currencies of the modern age and can also be a strategic resource and a lifeline for sustainable development Yet in Africa millions of people have never made a telephone call The technological gulf between developed and developing countries DCs is likely to widen further with the rapid expansion of the internet and the speedy transition to digitalisation in the West The impacts on DCs may include an increase in the so called brain drain and growing dependence on foreign aid of a different kind knowledge aid There are fears that knowledge imperialism is already with us What is clear is that most of the technological innovations in ICTs are Western designed and fail to address the needs of the most disadvantaged The interest of industrialised countries in the use of ICTs in DCs has largely been more concerned with the profitability of their own business enterprises than with any broader goals concerning the development of the host countries DCs face the challenge of either becoming an integral part of the knowledge based global economy or the very real danger of finding themselves on the wrong side of the digital divide Successful management in the new millennium requires developing new methods and approaches to meet the challenges and opportunities of this information revolution while at the same time fostering sustainable development Adopting a holistic approach this book aims to critically examine the interrelationship between these different issues in order to reach solutions and a consensus for a better future taking into account a variety of international institutional and intellectual perspectives It uses case and country studies in technological innovation and experience so that lessons in effective management of ICTs can be learned from successful initiatives ideas and innovations
