Building QoS into Distributed Systems Andrew T. Campbell, Klara Nahrstedt, 2013-06-29 Welcome to IWQOS 97 in New York City Over the past several years there has been a considerable amount of research within the field of Quality of Service QoS Much of that work has taken place within the context of QoS support for distributed multimedia systems operating systems transport subsystems networks devices and formal languages The objective of the Fifth International Workshop on Quality of Service IWQOS is to bring together researchers developers and practitioners working in all facets of QoS research While many workshops and conferences offer technical sessions on the topic QoS none other than IWQOS provide a single track workshop dedicated to QoS research The theme of IWQOS 97 is building QoS into distributed systems Implicit in that theme is the notion that the QoS community should now focus on discussing results from actual implementations of their work As QoS research moves from theory to practice we are interested in gauging the impact of ideas discussed at previous workshops on development of actual systems While we are interested in experimental results IWQOS remains a forum for fresh and innovative ideas emerging in the field As a result of this authors were solicited to provide experimental research long papers and more speculative position short statements for consideration We think we have a great invited and technical program lined up for you this year The program reflects the Program Committees desire to hear about experiment results controversial QoS subjects and retrospectives on where we are and where we are going

Energy-Related Material Flow Simulation in Production and Logistics Sigrid Wenzel, Markus Rabe, Steffen Strassburger, Christoph von Viebahn, 2023-12-14 This book provides for the first time an overview on the current approaches and applications of energy aspects in production and logistics by the use of simulation techniques During the last decade the importance of energy in the material flow processes has become more and more

important The pressure to reduce the environmental footprint of production and logistics systems will even intensify in future Therefore enterprises have started to integrate the use of energy into their planning processes much more than before even designing feedback loops e g from energy control to production control This receives additional attention with the increasing use of renewable but less reliable energy sources Care must be taken to establish processes that aim to use energy when it is available As an example many industrial processes like melting or coating have significant energy demands but could vary the point of time of its consumption within specific limits leading to a very high complexity It discusses the construction and application of energy specific performance indicators and analyzes the input information that needs to be acquired before implementing suitable models On this basis concrete technical solutions are introduced The Innovation Tools Handbook, Volume 1 H. James Harrington, Frank Voehl, 2016-04-26 In today's fast moving high technology environment the focus on quality has given way to a focus on innovation From presidents of the United States to presidents of Fortune 500 companies it is clear that everyone thinks innovation is extremely important The challenge is that few people stop to define why innovation is important to understand w **The Proceedings of the 1999 Summer Computer Simulation Conference** Mohammad S.
