Traditional Security Checklist Version 1, Release 3

Summary of Changes:

This third release of the Traditional Security Checklist provides updates to all existing rules using the identical rule format from Version 1, Release 2. The framework of the previous rules has not been altered. Hence the content and flow of the checklist does not change significantly. For instance most of the rule titles remain unchanged; however, individual checks and fixes (AKA: requirements) have been modified to incorporate changes in supporting/referenced Federal or Department of Defense (DoD) level publications. Additionally some checks and fixes have been modified to remedy problems or to incorporate recommendations received from Command Cyber Readiness Inspection (CCRI) reviewers and/or organizational customers via the STIG Customer Support issue resolution system. A few rule titles were modified to more accurately reflect the intent of the requirements being evaluated by the rule. Default severity levels for each rule remain unchanged.

There is only one new rule increasing the total from 151 to 152 rules. The added rule is:
Rule Title: Environmental IA Controls - Emergency Power, STIG ID: EC-03.03.02, Rule ID: SV-6119r1_rule, Vuln ID: V-61629, Severity: CAT II

The most significant changes to the checklist include:
1. Updated references are listed under the Vulnerability Discussion field for each rule.
2. The primary reference for Protected Distribution System (PDS) rules has been updated from the obsolete NSTISSI 7003 (PDS) to the CNSSI 7003 (PDS), dated September 2015
3. The primary reference for the Personnel Security (PERSEC) Program rules has been updated from the obsolete DoD 5200.2-R Personnel Security Program to the DoD Manual 5200.02, Procedures for the DoD Personnel Security Program (PSP), dated 3 April 2017
4. The primary reference for the National Industrial Security Program (NISPOM) has been updated from the February 2006, Incorporating Change 1 March 28, 2013 to the NISPOM February 2006, Incorporating Change 2, 18 May 18 2016
5. The primary reference for the DoD Information Security Program: Overview, Classification, and Declassification, Volume 1 has been updated to include Change 1, dated 4 May 2018
6. The primary reference for the DoD Information Security Program: Controlled Unclassified Information (CUI), Volume 4 has been updated to include Change 1, dated 9 May 2018. Note that the recently released DoD INSTRUCTION 5200.48 Controlled Unclassified Information (CUI) on 6 March 2020 is not included as a reference. This reference cancels the DoD Manual 5200.01, Volume 4, "DoD Information Security Program: Controlled Unclassified Information," February 24, 2012, as amended and dramatically changes the CUI program. As such the DoD is taking a "phased" approach to program implementation. The next Traditional Security Checklist update will include new/updated rules for implementation of the new CUI program. Until that time the existing rules may be continued to be used for evaluation of organizational CUI program compliance. Some flexibility will be needed and granted as the process to transition to the new program requirements evolves.
7. Additional Severity Level Overrides have been provided for requirements in numerous STIG rules, allowing for compensatory measures and other mitigations to reduce the impact level of findings during Command Cyber Readiness Inspections (CCRIs).
8. Reference STIG Rule:
Rule Title: Monitor Screens - Disable Access by CAC or Token Removal, or Lock Computer via Ctrl/Alt/Del, STIG ID: IS-08.01.02, Rule ID: SV-42292r3_rule, Vuln ID: V-31993, Severity: CAT I

or other forms of information communication technology has significantly increased during the last two decades in the USA and worldwide As a result cybersecurity scholars and practitioners have developed various tools and policies to reduce individuals and organizations risk of experiencing cyber dependent crimes However although cybersecurity research and tools production efforts have increased substantially very little attention has been devoted to identifying potential comprehensive interventions that consider both human and technical aspects of the local ecology within which these crimes emerge and persist Moreover it appears that rigorous scientific assessments of these technologies and policies in the wild have been dismissed in the process of encouraging innovation and marketing Consequently governmental organizations public and private companies allocate a considerable portion of their operations budgets to protecting their computer and internet infrastructures without understanding the effectiveness of various tools and policies in reducing the myriad of risks they face Unfortunately this practice may complicate organizational workflows and increase costs for government entities businesses and consumers The success of the evidence based approach in improving performance in a wide range of professions for example medicine policing and education leads us to believe that an evidence based cybersecurity approach is critical for improving cybersecurity efforts This book seeks to explain the foundation of the evidence based cybersecurity approach review its relevance in the context of existing security tools and policies and provide concrete examples of how adopting this approach could improve cybersecurity operations and guide policymakers decision making process The evidence based cybersecurity approach explained aims to support security professionals policymakers and individual computer users decision making regarding the deployment of security policies and tools by calling for rigorous scientific investigations of the effectiveness of these policies and mechanisms in achieving their goals to protect critical assets This book illustrates how this approach provides an ideal framework for conceptualizing an interdisciplinary problem like cybersecurity because it stresses moving beyond decision makers political financial social and personal experience backgrounds when adopting cybersecurity tools and policies This approach is also a model in which policy decisions are made based on scientific research findings **CompTIA Security+ Certification Bundle, Third Edition (Exam SY0-501)** Glen E.
