

How to Plant a Fruit Tree

Dig a hole slightly wider and deeper than root ball.

Do not add fertilizer to the hole.

Trim off broken or damaged roots before planting.

Rest the tree on a mound of soil in the bottom of the hole so the graft union is 2 to 3 inches above soil surface.

Fill in the hole, tamping the soil down as you go to remove air pockets.

After planting, give tree 2 to 3 gallons of water.

Drive a stake into the ground at the edge of the root zone, tying the tree to it using a soft material.

Apply 1" of mulch, making sure it doesn't touch the bark.

The Farmer's Cabinet, and American Herd Book ,1841 **Promoting adoption of sustainable land management technologies by women and couples in Ethiopia: Evidence from a randomized trial** Leight, Jessica, Bahiru, Kibret Mamo, Buehren, Niklas, Getahun, Tigabu, Gilligan, Daniel O., Mulford, Michael, Tabet, Heleene, 2025-02-14 Sustainable land management SLM technologies including composting and agro forestry are widely promoted as strategies to counter land degradation and enhance resilience against adverse weather shocks Given that women are disproportionately vulnerable to such shocks promoting their uptake of these technologies may be particularly important We conducted a randomized trial in rural Ethiopia analyzing a bundled intervention providing training and inputs designed to encourage uptake of three interrelated SLM technologies fruit tree planting composting and home gardening The trial included 1900 extremely poor

households in 95 subdistricts randomly assigned to treatment arms in which women only or couples were included in the intervention. The findings one year post baseline suggest a positive and large effect on take up of all three technologies: the probability of reporting any trees increased by eight percentage points and the probability of reporting a garden and/or composting increased by 20 to 30 percentage points symmetrically across treatment arms. There are also significant reported increases in household vegetable production and consumption as well as in women's dietary diversity. There is, however, some evidence that tree survival rates and tree health are weakly lower in intervention households compared to control households who spontaneously planted trees. Some positive effects on equitable intrahousehold decision making and task sharing are observed especially in the couples training arm but in general there is no robust evidence that either intervention significantly shifted intrahousehold gender dynamics.
