The Medical Device Industry John Burton, 2009-03-26 The Medical Device industry is one of the fastest growing industries in the world Device manufacturers are producing increasingly sophisticated and complex medical device software to differentiate themselves in the battle for dominance in this sector The increase in the complexity of medical device software has introduced new challenges with respect to making medical devices and their associated software safe Risk management has emerged as key in addressing these challenges Existing literature on risk management for medical devices has been slow to adequately account for the complex nature of software in modern medical devices Conversely excellent progress has been made in the broader Software Engineering community with the production of holistic software risk based models such as the Capability Maturity Model Integration CMMI and SPICE However these models do not account for medical device specific requirements This book examines the possibility of a unified approach whilst investigating the relevance of the CMMI SPI model to the medical device regulatory requirements

An Analysis of the Risk Management Process in a Medical Device Company Bli Yang, 2014

With many medical device applications and the potential risks to patient safety medical device manufacturers are challenged with the concern of product liability This research focused on quality factors within the risk management process at Company XYZ that may contribute to product failures and recalls by regulatory bodies History recall data was collected from U S FDA website on Company XYZ and analyzed for common trend In addition a check sheet assessment based on ISO 14971 and the quality management system concepts was developed to compare the risk management process in the effort to mitigate device failures Results indicated that Company XYZ device recall reached the highest numbers during the 2011 calendar year with a total of 95 Further observation revealed that recall categories totaled the highest in design and development The results from the gap analysis check sheet indicated the lack of proficiency in risk control efforts by

employees The lack of risk assessment tools such as preliminary hazard analysis inhibits a full extraction of the failure modes in early design and development stages To improve the risk management system upper management is recommended to create a risk based culture to ensure adequate training and competency in risk assessments methods and controls
