

This volume contains all the exercises, and their solutions, for Serge Lang's fourth edition of *Complex Analysis*. The problems in the first 8 chapters are suitable for an introductory course at the undergraduate level and cover the following topics: power series, Cauchy's theorem, Laurent series, singularities and meromorphic functions, the calculus of residues, conformal mappings, and harmonic functions. The material in Chapters 9 to 18 is more advanced. The reader will find problems on Schwarz's reflection, analytic continuation, Jensen's formula, the Poincaré-Lindelöf theorem, entire functions, bilinear fractional products, meromorphic functions, the Gamma function, and the Zeta function.

This volume also serves as an independent source of problems with detailed answers beneficial for anyone interested in learning complex analysis. Original drawings, provided by the author, assist students in their mastery of problem-solving techniques and increase their overall comprehension of the subject matter.
