INDUSTRIAL ECOLOGY - TERM PROJECT

A Design Project and Case Study

For the design project and case study, you are required to form teams of four students. Each group will select one of the following existing products:

- Coffee cups
- Desk telephone
- Bicycle
- Coffee maker
- Head mirror
- Underwater disposable camera

and analyze its eco-efficiency using the knowledge and skills you will acquire during this course. The task comprises four key steps:

1. *Identification*
2. *Analysis of materials, energy and consumables used in product and product use*
3. *Product redesign*
4. *Suggestions for improvements of technical, cost and eco performance*

Because the term project involves real-world activities, students should expect that there will be gaps in information needed on their topics, and that the criteria used to make recommendations may be ambiguous. Teams are expected to take full account of the uncertainty of their recommendations by highlighting data gaps and the sensitivity of recommendations to assumptions. In actual practice, analyses which highlight gaps in information, identify critical assumptions, and place bounds around a possible answer are often just as useful as analyses which are able to provide clear-cut solutions. Consequently, teams will be evaluated on the thoroughness and creativity of their analyses and recommendations.

Design Project Milestone and Final Report Requirements

In a written report of 15 to 25 pages (40 students), the report may be shorter and only needs to cover the subjects covered in class – design process, how you found it, Issues New Business maximum 10pg, figures and tables included, appendix with raw data, raw multi output, etc and references are included in page count- each group of students presents answers to the case design questions relevant to their particular case study. Drawings may be hand drawn or computer generated, and should demonstrate good engineering practice. The report should include an abstract, introduction, product and component description, detailed list of assumptions, case design requirements and materials selection

Managing an organization especially in today's rapidly changing environment is a highly complex process. Increased competition in the marketplace especially as a result of the massive and successful entry of foreign businesses into domestic markets, changes in consumer behaviour and broader access to new technologies and information calls for organisational restructuring and the introduction and modification of management methods using the latest scientific advances. This situation has prompted various decision making bodies to introduce computer modelling of organization management systems. This book presents the peer reviewed proceedings of the 40th Anniversary International Conference Information Systems Architecture and Technology ISAT held on September 15-17 2019 in Wrocław Poland. The conference was organised by the Computer Science Department Faculty of Computer Science and Management Wrocław University of Sciences and Technology and University of Applied Sciences in Nysa Poland. The papers have been grouped into three major sections. Part I discusses topics including but not limited to artificial intelligence methods, knowledge discovery and data mining, big data, knowledge based management, Internet of Things, cloud computing and high performance computing, distributed computer systems, content delivery networks and service oriented computing. Part II addresses various topics such as system modelling for control, recognition and decision support, mathematical modelling in computer system design, service oriented systems and cloud computing and complex process modelling. Part III focuses on a number of themes like knowledge based management, modelling of financial and investment decisions, modelling of managerial decisions, production systems management and maintenance, risk management, small business management and theories and models of innovation.
