Segal,1982 Cumulated Index Medicus ,1996 **Current Bibliography of Epidemiology** ,1972 *Dogs, Zoonoses and Public Health* Calum N. L. Macpherson,Francois-X. Meslin,Alexander I.

Wandeler,2013 Zoonotic diseases constitute a public health problem throughout the world Addressing a little studied area of veterinary and medical science this book covers the viruses bacteria and protozoan and helminth parasites that are transmitted between man and dogs discussing population management control disease agents and human dog relationships Fully updated throughout this new edition also includes two new chapters on benefits of the human dog relationship and non infectious disease issues with dogs It is a valuable resource for researchers and students of veterinary and human medicine microbiology parasitology and public health *Diseases at the Wildlife - Livestock Interface* Joaquín Vicente,Kurt C.

Vercauteren,Christian Gortázar,2021-04-29 Shared diseases among wildlife livestock and humans often transboundary are relevant to public health and global economy as being highlighted currently relative to the global COVID19 pandemic Diseases at these interfaces also impact the conservation of biodiversity and must be considered when managing wildlife While wildlife and domestic livestock have coexisted in dynamic systems for thousands of years spillover disease risks are higher today than in the past due to global patterns of increasing close contact and interactions among wildlife livestock and humans in the context of complex diverse and numerous circumstances Multidisciplinary studies of animal interfaces especially those involving wildlife therefore must be brought to the forefront so that knowledge gaps can be realized and filled to inform managers and policy makers In the first part of the book authors illustrate and discuss ecological and epidemiological concepts related to the interfaces with a vision towards socio ecological system health In addition the history of past animal interfaces provides the necessary perspective to focus current questions better understand present situations and informs how we can best approach the future The second part discusses the myriad of similar and differing wildlife livestock interfaces found around the world from a regional point of view The third part focuses on how to assess the spatial and temporal overlap between livestock and wildlife and authors present new technical innovations about how inter transmissions between wild and domestic populations can be quantified An overview of main modeling approaches available to quantify multi host disease transmission at the wildlife livestock interface illustrated with specific case studies is also presented Finally the need for interdisciplinary approaches and a dedicated thematic field to approach the wildlife livestock interfaces and create opportunities to promote wildlife livestock coexistence is emphasized The concluding chapter presents perspectives and directions to better understanding disease dynamics at the wildlife livestock interface global change and implications for the future The changing distribution of interfaces ongoing human and environmental changes e g climate warming changes in animal production systems etc and their likely impacts and consequences for the interfaces and disease transmission processes are all discussed **Parasitic helminths and zoonoses in Africa** P. Craig,C.

MacPherson,2012-12-06 Helminths include one of the most diverse and geographically widespread groups of parasites which infect humans and animals About 100 species have been reported from humans usually producing asymptomatic infection or mild symptoms However about 20 species are of public health importance causing severe or even fatal infections In many

parts of Africa parasitic helminths are responsible for enormous economic losses hampering rural development programmes and reducing the pace of economic growth Many parasitic helminths are either zoonoses diseases naturally transmitted between vertebrate animals and man or have evolved from animal parasites The modification of the environment through wars famine and the ever expanding and increasingly mobile human population brings people into close contact with new environments and wildlife species which makes the study and control of zoonoses of special interest and complexity In Africa the transmission of helminth parasites is highly influenced by the ever changing social and cultural differences between diverse groups of peoples and their interaction with wild and domestic animals It is not surprising therefore that approaches to the study and control of parasitic zoonoses require intersectoral cooperation between physicians veterinarians parasitologists zoologists demographers anthropologists engineers and economists to provide the breadth of knowledge and expertise required to develop our understanding of these diseases and to devise methods for their control This book provides a selective compilation of parasitic helminths many of which are zoonoses which create important economic and public health problems in Africa

Socioecosystems Patrick Giraudoux, 2022-06-16 The idea of socioecosystems answers the growing need to understand in the context of the Anthropocene how adaptive processes interact and how that interplay results in the coevolution of living beings Studying socioecosystems means taking into account the diversity of temporal and physical scales in order to grasp how ecological social and economic forces are interwoven Based on these drivers the complex dynamics that determine the habitability of the Earth emerge This book analyzes through concrete cases from regional socioecosystems on several continents how research action has provided answers to problems related to agriculture health and the conservation of biodiversity It demonstrates that these undertakings could not have succeeded without the combined efforts of the communities of living beings and objects the community of knowledge and the communities of action These examples are accompanied by a reflection on the conditions that make it possible to bring this research to completion

One Health: The Human-Animal-Environment Interfaces in Emerging Infectious Diseases John S. Mackenzie, Martyn Jeggo, Peter Daszak, Juergen A. Richt, 2013-11-22 One Health is an emerging concept that aims to bring together human animal and environmental health Achieving harmonized approaches for

disease detection and prevention is difficult because traditional boundaries of medical and veterinary practice must be crossed In the 19th and early 20th centuries this was not the case then researchers like Louis Pasteur and Robert Koch and physicians like William Osler and Rudolph Virchow crossed the boundaries between animal and human health More recently Calvin Schwabe revised the concept of One Medicine This was critical for the advancement of the field of epidemiology especially as applied to zoonotic diseases The future of One Health is at a crossroads with a need to more clearly define its boundaries and demonstrate its benefits Interestingly the greatest acceptance of One Health is seen in the developing world where it is having significant impacts on control of infectious diseases Proceedings of the First International Congress of Parasitology Augusto Corradetti, 2014-05-16 Proceedings of the First International Congress of Parasitology *New Zealand Journal of Zoology* , 1985 Greene's Infectious Diseases of the Dog and Cat - E-Book Jane E. Advances in Parasitology, 1977-03-31 *Advances in Parasitology* **Dermatopathology of Tropical Diseases** Omar P Sangüeza, Martin Sangüeza, Francisco Bravo, 2017-03-15

The majority of tropical diseases manifest themselves through the skin and while many can be diagnosed on physical examination dermatopathologic results are often of critical importance to the diagnostic process However general dermatopathology texts lack images of diseases endemic in the developing world they also lack clinical correlates linking the pathology to the clinical entity This is a problem because greater movement between countries where tropical diseases are prevalent and Europe North America and other developed nations makes it essential for physicians to be able to recognize diagnose and treat these diseases *Dermatopathology of Tropical Diseases* covers the pathology and clinical correlations of the most important tropical diseases Each entity is described using brief text that summarises its epidemiology pathogenesis and clinical features The diagnostic process is then described and illustrated using both clinical and histopathologic images Wherever possible different examples are shown of the same disease in order to illustrate as wide a variety of presentations as possible Extensively illustrated with almost 600 photographs *Dermatopathology of Tropical Diseases* is an invaluable resource for dermatopathologists pathologists and dermatologists based in the developing world as well as those in developed countries who see tropical diseases in returned travellers and immigrant populations

Key features Includes chapters on all major tropical diseases with both clinical and histopathological images provided for each entity allowing the reader to correlate pathological characteristics with the clinical presentation of each disease Wherever possible different examples of the same disease are shown to illustrate the variety of presentations Lavishly illustrated with almost 600 colour photographs
