PRICAI 2000 Topics in Artificial Intelligence Riichiro Mizoguchi,John Slaney,2007-12-07 PRICAI 2000 held in Melbourne Australia is the sixth Pacific Rim Interna tional Conference on Artificial Intelligence and is the successor to the five earlier PRICAIs held in Nagoya Japan Seoul Korea Beijing China Cairns Aus tralia and Singapore in the years 1990 1992 1994 1996 and 1998 respectively PRICAI is the leading conference in the Pacific Rim region for the presenta tion of research in Artificial Intelligence including its applications to problems of social and economic importance The objectives of PRICAI are To provide a forum for the introduction and discussion of new research results concepts and technologies To provide practising engineers with exposure to and an evaluation of evolving research tools and practices To provide the research community with exposure to the problems of practical applications of AI and To encourage the exchange of AI technologies and experience within the Pacific Rim countries PRICAI 2000 is a memorial event in the sense that it is the last one in the 20 century It reflects what researchers in this region believe to be promising for their future AI research activities In fact some salient features can be seen in the papers accepted We have 12 papers on agents while PRICAI 96 and 98 had no more than two or three This suggests to us one of the directions in which AI research is going in the next century It is true that agent research provides us with a wide range of research subjects from basic ones to applications **Advances in Artificial Intelligence. Marzollo,2014-09-24 *Artificial Intelligence Principles And Applications* Dr. Shivpal Singh,Dr. S. Ayyasamy,Shobhanjaly P Nair,P Uma,2023-11-21 Fundamentally artificial intelligence is a domain that integrates computer science with dependable datasets in order to facilitate the resolution of problems Furthermore it incorporates the sub disciplines of deep learning and machine learning which are often referenced in relation to artificial intelligence These fields consist of artificial intelligence algorithms that aim to develop expert systems capable of generating predictions or classifications using input data Despite the fact that artificial intelligence has experienced numerous cycles of exaggeration over the years the introduction of OpenAI s ChatGPT appears to even sceptics as a turning point The previous time generative AI loomed so large advancements were concentrated in computer vision however natural language processing is now where the real progress is In addition to language generative models are capable of acquiring grammatical knowledge of molecules natural images software code and an extensive range of other data formats The objective of this book is to facilitate constructive discourse and thoughtful consideration regarding artificial intelligence through the provision of an approachable examination of AI technology its consequences and available alternatives The subsequent chapter will attempt to dispel the enigma surrounding AI by describing its fundamental methods how they operate as well as their capabilities and constraints The following chapter

analyses the primary prospects and obstacles that arise from the implementation of these technologies In the penultimate chapter a variety of regulatory technological and societal responses to these opportunities and challenges are outlined The concluding chapter provides several essential messages Advances in Applied Artificial Intelligence Fulcher, John,2006-03-31 This book explores artificial intelligence finding it cannot simply display the high level behaviours of an expert but must exhibit some of the low level behaviours common to human existence Provided by publisher
