The Primate Nervous System, Part III Floyd E. Bloom, A. Bjorklund, T. Hokfelt, 1999-10-26 This volume is the third and final part of the planned coverage of the neurochemical circuitry of the primate central nervous system The five chapters included in this volume complement and integrate magnificently with the two prior volumes Included in the volume are the following a two fold exposition on the human forebrain comprised of a comprehensive overview of the entire human forebrain and a specific focus on the basal forebrain a region critical for a wide range of human problems ranging from substance abuse to Alzheimer's disease a critical synthesis of the primate basal ganglia a region under intense scrutiny for the organization of motor programs and for their dysfunctions in Parkinson's disease Huntington's disease and other malfunctions the chemical and anatomic details of the primate hippocampal formation in extenso and lastly a review of the rapidly growing literature on the mesocortical projection of dopaminergic circuits onto the primate frontal cortex a system

highly linked to higher order mental abstractions as well as the dysfunctions of schizophrenia Scholars will recognize that the laying out of these status reports on our still vastly incomplete examination of the primate brains is an opportunity for progress

The Natural History of Primates Robert W. Sussman, Donna Hart, Ian C. Colquhoun, 2022-10-20 The interest in primates from lemurs to gorillas has never been greater Primatologists are continually finding evidence in the behavior and ecology of our closest genetic relatives that sheds light on human origins So just who are these 520 species of complex and intelligent mammals inhabiting the Neotropics Africa Madagascar and Asia The Natural History of Primates provides the most current information on wild primates from experts who have studied them in their natural environments This volume provides up to date facts and figures on how groups of social primates interact with each other and the plants and other animal species in their ecosystems what they eat which predators might eat them how males and females seek mates how infants are raised and myriad other fascinating details about their visual and vocal communication their ability to craft and use tools and the varieties of locomotion they employ As human populations continue to expand into the rainforests savannas and woodlands where nonhuman primates dwell the preservation of these species becomes ever more important The Natural History of Primates is unique in its emphasis on the conservation status of primate species and its ample discussions of how humans and nonhuman primates can coexist in the twenty first century

The Dwarf and Mouse Lemurs of Madagascar Shawn M. Lehman, Ute Radespiel, Elke Zimmermann, 2016-04-07 The dwarf and mouse lemurs of Madagascar are two very species rich lemur genera yet there is a relative paucity of information on this primate family in published literature In this first ever treatment of the Cheirogaleidae international experts are brought together to review and integrate our current knowledge of the behaviour physiology ecology genetics and biogeography of these species A wide range of direct and indirect research methods that are currently used to study these cryptic nocturnal solitary foragers are described By uniting often disparate research on captive and free ranging taxa and synthesising recent methodological advances this book provides new insights that will encourage further studies of this fascinating primate family This synthesis will provide an incentive for more integrative studies of the Cheirogaleidae in captivity and in the wild enabling the impacts of deforestation and other factors to be identified and directions for future conservation efforts to be established
