

The background of the book cover is a photograph of a landscape. In the foreground, there is a dark, silhouetted hill with several tall, thin trees. The middle ground shows a series of jagged, rocky mountain peaks or cliffs, also in silhouette. The sky is a gradient of colors, from a pale blue at the top to a warm yellow-orange near the horizon, suggesting a sunrise or sunset. The overall mood is serene and naturalistic.

Principles Of Conservation Biology Third Edition:

Principles of Conservation Biology Martha J. Groom, Gary K. Meffe, Carl Ronald Carroll, 2006 *Principles of Conservation Biology* Third Edition is a complete revision of the most comprehensive textbook on conservation biology. Written by leading experts in the field, it is intended for use in conservation biology courses at the advanced undergraduate and graduate levels as well as by researchers and practitioners. It assumes a basic background in biology and ecology. The text introduces the major themes and concepts of the diverse and dynamic field of conservation biology. The biological and social underpinnings of conservation problems and potential solutions are interwoven throughout the text, which is divided into 4 sections: foundations of the field, threats to biodiversity, contexts for conservation, and practical applications of conservation biology in a real and complex world. Guest essays and case studies provide a diversity of perspectives and real-world examples that add insight and provoke discussion. The Third Edition features a wholly revised organization emphasizing both analyses of different categories of threat and approaches to conservation. Coverage has been expanded to emphasize both terrestrial and marine conservation issues and efforts in the US and across the globe. The book is richly illustrated and concludes with an extensive glossary of useful terms and a large bibliography that has proved a valuable reference for students and researchers.

The Changing Nature of the Maine Woods Andrew M. Barton, 2012 The ecology of the ever changing Maine forest Thinking Like a Planet J. Baird Callicott, 2014-01-06 Bringing together ecology evolutionary moral psychology and environmental ethics J Baird Callicott counters the narrative of blame and despair that prevails in contemporary discussions of climate ethics and offers a fresh more optimistic approach Whereas other environmental ethicists limit themselves to what Callicott calls Rational Individualism in discussing the problem of climate change only to conclude that essentially there is little hope that anything will be done in the face of its perfect moral storm in Stephen Gardiner's words Callicott refuses to accept this view Instead he encourages us to look to the Earth itself and consider the crisis on grander spatial and temporal scales as we have failed to in the past Callicott supports this theory by exploring and enhancing Aldo Leopold's faint sketch of an Earth ethic in *Some Fundamentals of Conservation* in the Southwest a seldom studied text from the early days of environmental ethics that was written in 1923 but not published until 1979 after the environmental movement gathered strength Protecting Life on Earth Michael P. Marchetti, Peter B. Moyle, 2010-09 An excellent introduction to the science and policy of conservation biology for anyone interested in becoming better informed about today's pressing environmental challenges Wayne P Sousa University of California Berkeley *Mediterranean quarry rehabilitation manual* IUCN Regional Office for West Asia, 2015-11-02

Conservation by Proxy Tim Caro, 2010-06-23 Because of the scope of conservation problems biologists and managers often rely on surrogate species to act as proxies to represent larger conservation issues In *Conservation by Proxy* conservation biologist and field researcher Tim Caro offers systematic definitions of surrogate species concepts explores the theories behind them considers how surrogate species are chosen examines evidence for and against their utility and makes recommendations for their continued use

Fragmentation in Semi-Arid and Arid Landscapes Kathleen A. Galvin, Robin S. Reid, Roy H. Behnke, Jr., N. Thompson Hobbs, 2007-10-12 Casual readers of the title of this book might be forgiven for thinking that it is a little esoteric far removed from the pressing day to day concerns of humans and wildlife in the drylands of the world But they could not be more wrong It addresses an issue of the utmost practical importance in the world today yet does so on the basis of exciting new theory about how the world operates Of the billion or so human beings who now live in the world's arid and semi arid lands a majority depend on natural resources for their livelihoods These natural resources include livestock and their forage as well as the wild biota that creates opportunities for tourism or subsistence harvesting Arid and semi arid lands are spread over a third of the world's land surface from Colorado to the Kalahari the Sahel to the Simpson the Altai Steppe to Amboseli Notwithstanding their diversity these lands are broadly characterized by low productivity management at large scales and great climate variability in short by high spatial and temporal heterogeneity This book is about the implications of that high spatial and temporal heterogeneity for life management and policy in arid and semi arid lands

Extinction in Our Times James P. Collins, Martha L. Crump, Thomas E. Lovejoy III, 2009-07-07 For over 350 million years thousands of species of amphibians

have lived on earth but since the 1990s they have been disappearing at an alarming rate in many cases quite suddenly and mysteriously What is causing these extinctions What role do human actions play in them What do they tell us about the overall state of biodiversity on the planet In *Extinction in Our Times* James Collins and Martha Crump explore these pressing questions and many others as they document the first modern extinction event across an entire vertebrate class using global examples that range from the Sierra Nevada of California to the rainforests of Costa Rica and the Mediterranean coast of North Africa Joining scientific rigor and vivid storytelling this book is the first to use amphibian decline as a lens through which to see more clearly the larger story of climate change conservation of biodiversity and a host of profoundly important ecological evolutionary ethical philosophical and sociological issues Climate Savvy Lara J. Hansen, Jennifer Ruth Hoffman, 2010-10-13 Climate change demands a change in how we envision prioritize and implement conservation and management of natural resources Addressing threats posed by climate change cannot be simply an afterthought or an addendum but must be integrated into the very framework of how we conceive of and conduct conservation and management In *Climate Savvy* climate change experts Lara Hansen and Jennifer Hoffman offer 18 chapters that consider the implications of climate change for key resource management issues of our time invasive species corridors and connectivity ecological restoration pollution and many others How will strategies need to change to facilitate adaptation to a new climate regime What steps can we take to promote resilience Based on collaboration with a wide range of scientists conservation leaders and practitioners the authors present general ideas as well as practical steps and strategies that can help cope with this new reality While climate change poses real threats it also provides a chance for creative new thinking *Climate Savvy* offers a wide ranging exploration of how scientists managers and policymakers can use the challenge of climate change as an opportunity to build a more holistic and effective philosophy that embraces the inherent uncertainty and variability of the natural world to work toward a more robust future **Santa Clara Valley Habitat Plan**, 2010 *Remote Sensing for a Changing Europe* EARSeL. Symposium, 2009 Includes proceedings that cover 84 papers presented at the Remote Sensing for a Changing Europe symposium held in Istanbul Turkey 2 5 June 2008 **Non-native Species and Their Role in the Environment** Radu Cornel Guiaşu, 2016-08-01 The young field of invasion biology initially a branch of ecology and conservation biology has greatly expanded particularly in the last two and a half decades or so As a result the potential negative effects of introduced species have been widely advertised and sometimes perhaps overemphasized This book attempts to restore some balance to the current debate over the role of non native species by offering a broader perspective and taking a longer term evolutionary look at these species and their impact in their new environments The relatively arbitrary nature of terms such as native and non native and the rather inconsistent ways in which such terms are applied to biological species as well as the subjective boundaries of so called native ranges are analyzed The role of non native species in their new environments can be considerably more complex than the anti introduced species information would often

suggest Thus the more positive and nuanced perspective on introduced species and their impact offered in this book is much needed and long overdue
