**Microphone Techniques in Stereo and Surround Recording** Adam Rosiński, 2022-11-22 Sound engineering is one of the fastest growing branches of music production The need for a broad based discussion on the issues constituting the art of sound engineering persists and loses none of its relevance revealing that sound engineering should not be investigated only in the mathematical and physical context musical acoustics or the engineering aspect signal processing and modification Publications targeted primarily at musicians are few and far between which is why the mutual understanding for different priorities which effectively concern the same issues faced by the engineer the acoustician and the musician seems to be a complex problem and the main concept explored in this publication This book is intended for musicians or sound directors but also acousticians and sound engineers wishing to learn how the musicians think The monograph is also addressed to musicians who intend to record their material in the studio in the near future but do not possess knowledge on studio construction studio workflow or the art of recording It seems important to familiarize the musicians with the reality that awaits them on the other side of the glass thus fostering their responsibility for the work jointly produced by them entering the studio and the sound director

**The Logic of Filtering** Melle Jan Kromhout, 2021 The Logic of Filtering traces the profound impact of technical media on the sound of music asking how do media technologies shape sound How

does this affect music And how did it change what we listen for in music Since the invention of sound recording in the second half of the nineteenth century media that transmit record store and reproduce physical sound inspired dreams of perfect reproduction but were also confronted with the inevitable introduction of noise Based on a wide range of historical technical and theoretical sources author Melle Jan Kromhout explores this one hundred and forty year history of sound media and shows why noise should not be understood as unwanted by effect but instead plays a foundational role in shaping the sonic contours of recorded music The Logic of Filtering develops an extensive media archaeological analysis of the noise of sound media encompassing all the disturbances distortions and interferences that these media add to the sounds they reproduce It thereby stands to enrich our understanding of the way in which sound media changed and continue to change the sonorous qualities of music and offers new perspectives on the interaction between music media and listeners
