From Rodinia To Pangea The Lithotectonic Record Of The Appalachian Region Memoirs Geological Society Of America:

From Rodinia to Pangea Richard P. Tollo, 2010 The Appalachians constitute one of Earth's major tectonic features and have served as a springboard for innovative geologic thought for more than 170 years. This volume contains 36 original papers reporting the results of research performed throughout nearly the entire length and breadth of the Appalachian region including all major provinces and geographical areas. Memoir 206 was designed to commemorate the near fortieth anniversary of the publication of the classic *Studies of Appalachian Geology* volumes that appeared just prior to the application of plate tectonic concepts to the region. Contributions concerning structural evolution, sedimentation, stratigraphy, magmatic processes, metamorphism, tectonics, and terrane accretion illustrate the wide range of ongoing research in the area and collectively serve to mark the considerable progress in scientific thought that has occurred during the past four decades.

A Global Synthesis of the Ordovician System: Part 1 D.A.T. Harper, B. Lefebvre, I. G. Percival, T. Servais, 2023-06-07 The Ordovician was one of the longest of the geological periods characterized by major magmatic and tectonic activity, an immense biodiversification, swings in climate and sea levels, and the first Phanerozoic mass extinction. A Global Synthesis of the Ordovician System is presented in two volumes in The Geological Society Special Publications. This first volume, SP532, charts the history of the Ordovician System and explores significant advances in our understanding of its biostratigraphy, including more precise calibration of its timescale with tephra chronology and regional alignments using astrochronology and cyclostratigraphy. Changes in the world's oceans, their shifting currents and sea levels, the biogeography of their biotas, and the ambient climate are described and discussed against a background of changing palaeogeography. This first volume also includes syntheses of the Ordovician geology for most European countries, including historical key areas such as Great Britain, Baltoscandia, and Bohemia. The second volume, SP533, provides synthetic aspects of the Ordovician geology of most other parts of the world.

Fifty Years of the Wilson Cycle Concept in Plate Tectonics R.W. Wilson, G.A. Houseman, K.J.W. McCaffrey, A.G. Doré, S.J.H. Buiter, 2019-11-11 Fifty years ago Tuzo Wilson published his paper asking, "Did the Atlantic close and then re-open?" This led to the Wilson Cycle concept, in which the repeated opening and closing of ocean basins along old orogenic belts is a key process in the assembly and breakup of supercontinents. The Wilson Cycle underlies much of what we know about the geological evolution of the Earth and its lithosphere and will, no doubt, continue to be developed as we gain more understanding of the physical processes that control mantle convection, plate tectonics, and as more data become available from currently less accessible regions. This volume includes both thematic and review papers covering various aspects of the Wilson Cycle concept. Thematic sections include: 1. The Classic Wilson v. Supercontinent Cycles; 2. Mantle Dynamics in the Wilson Cycle; 3. Tectonic Inheritance in the Lithosphere; 4. Revisiting Tuzo's question on the Atlantic; 5. Opening and Closing of Oceans; and 6. Cratonic Basins and their place in the Wilson Cycle.

Tripping from the Fall Line

David K. Brezinski, Jeffrey P. Halka, Richard A. Ortt Jr., 2015-10-07 Emanating from the Fall Line city of Baltimore site of the 2015 GSA Annual Meeting these trips reflect the diversity of geological features in the mid Atlantic region including the Piedmont Appalachian Mountains and Coastal Plain and the importance of geology on the development and construction of the Baltimore Washington D C metropolitan area *Cratonic Basin Formation* M. C. Daly, R. A. Fuck, J. Julià, D. I. M. Macdonald, A. B. Watts, 2018-12-03 Cratonic basins are large distinctive features of the continental crust They are preferentially developed on thick continental lithosphere are typically sub circular in shape and subside over periods of hundreds of millions of years They are also endowed with significant resources However in spite of their location in continental interiors and often well known geology the subsidence driving mechanism and tectonic setting of these basins remains controversial This volume presents both lithospheric and basin scale datasets acquired specifically to interrogate the tectonic process of cratonic basin formation Focused on the Silurian to Triassic Parna ba cratonic basin of Brazil the papers discuss the results of a multidisciplinary basin analysis project comprising new geophysical geological and geochemical data This unique dataset enables the characterization of the lithospheric crust and mantle beneath the Parna ba Basin constrains the detailed evolution of the basin itself and enables comparisons with cratonic basins globally Several convergent themes emerge providing new and powerful constraints for models of the driving mechanisms of these enigmatic basins **North America's Natural Wonders** Gary Prost, 2020-02-20 Written by a career geologist with decades of experience in the field North America s Natural Wonders guides readers through the most iconic geologically significant scenery in North America points out features of interest explains what they are seeing and describes how these features came to be Presented as classic excursions to some of the best known natural wonders on the continent Volume II focuses primarily on Central and Eastern North America including the Appalachians the Colorado Rockies Austin Big Bend Country and the Sierra Madre The trips detailed in this volume include stops at quintessential features such as the Shenandoah Valley Carlsbad Caverns Big Bend National Park and La Popa Basin of Nuevo Le n and Coahuila Mexico as well as many others It also features discussions of lesser known but equally interesting geologic formations and important information on accessing these sites Features Clearly explains the geology of these regions with an emphasis on landscape formation Addresses issues of interest such as fossils earthquakes mineral sites mining and oil fields Lavishly illustrated with numerous colorful maps and breathtaking geological landscapes and their various features These six self guided tours explain to the curious layman student and geologist what they are seeing when they look at a roadcut or a quarry and enhances the experience far beyond simple sightseeing Devonian Climate, Sea Level and Evolutionary Events R. T. Becker, 1st, C. E. Brett, P. Königshof, 2nd, 2016-10-20 The geological and palaeontological records of climate change and evolutionary events reflect Earth s widely fluctuating climate systems Past climates hold the clues to understanding future developments In this context research on linked climate biodiversity and sea level fluctuations of the Devonian contributes to the general knowledge of deep time

climate dynamics A fruitful co operation between the International Geoscience Programme IGCP 596 and the International Subcommission on Devonian Stratigraphy SDS addressed the complex succession of climate linked Devonian global events of varying magnitude The primary goal of IGCP 596 was to assess mid Palaeozoic climate changes and their impact on marine and terrestrial biodiversity using an interdisciplinary approach The focus of SDS includes a revision of the eustatic sea level curve and the integration of refined chrono and biostratigraphy with modern chemo magneto cyclo event and sequence stratigraphy This enabled the much improved dating and correlation of abiotic perturbations evolutionary changes organism and ecosystem ranges Results by 37 authors are presented in 14 chapters which cover the entire Devonian

Glaciated Margins D.P. Le Heron,K.A. Hogan,E.R. Phillips,M. Huuse,M.E. Busfield,A.G.C. Graham,2019-04-08 Understanding the sedimentary and geophysical archive of glaciated margins is a complex task that requires integration and analysis of disparate sedimentological and geophysical data Their analysis is vital for understanding the dynamics of past ice sheets and how they interact with their neighbouring marine basins on timescales that cannot be captured by observations of the cryosphere today As resources sediments deposited on the inner margins of glaciated shelves also exhibit resource potential where more sand dominated systems occur acting as reservoirs for both hydrocarbons and water This book surveys the full gamut of glaciated margins from deep time Neoproterozoic Ordovician and Carboniferous Permian to modern high latitude margins in Canada and Antarctica This collection of papers is the first attempt to deliberately do this allowing not only the similarities and differences between modern and ancient glaciated margins to be explored but also the wide spectrum of their mechanisms of investigation to be probed Together these papers offer a high resolution spatially and temporally diverse blueprint of the depositional processes ice sheet dynamics and basin architectures of the world s former glaciated margins a vital resource in advancing understanding of our present and future marine terminating ice sheet margins

Geology of the Appalachian—Caledonian Orogen in Canada and Greenland Harold Williams,1995 This volume focuses on the Canadian Appalachian region The chapter on the East Greenland Caledonides stands alone and there is no attempt to integrate the geological accounts of the two far removed regions Rocks of the Canadian Appalachian region are described under four broad temporal divisions lower Paleozoic and older middle Paleozoic upper Paleozoic and Mesozoic The rocks of these temporal divisions define geographic zones belts basins and graben respectively The area is of special interest because so many modern concepts of mountain building are based on Appalachian rocks structures

Kellett,Basil Tikoff,2023-01-04 This Memoir focuses on 7 turning points that had specific and lasting impacts on Laurentian evolution The Neoproterozoic characterized by cratonization the Paleoproterozoic and the initial assembly of Laurentia the Mesoproterozoic southern margin of Laurentia the Midcontinent rift and the Grenville orogeny the Neoproterozoic breakup of Rodinia the mid Paleozoic phases of the Appalachian Caledonian orogen and the Jurassic
