Energy Efficiency in Air Transportation Arturo Benito, Gustavo Alonso, 2018-06-23 Energy Efficiency in Air Transportation explores the relationship between air transportation and energy use starting with an analysis of air transport energy sources and their potential development The book examines how different elements of the air transport system make use of energy with an analysis of various methods for optimizing energy consumption The book covers the consequences of energy use in terms of economics environmental impact and sustainable development with a review of the existing and proposed regulatory measures addressing those factors Aeronautical and air transport engineers interested in aerial vehicle systems design as well as public administrators and regulators concerned with energy efficiency or environmental issues in air transport will benefit greatly from this comprehensive reference which captures necessary background information along with the newest developments in the field Examines new developments in energy efficiency in the air transport field Includes exergy analyses of aerial vehicles and systems Shows the environmental impact from fuel use including local air quality consumption of non renewable materials and contribution to climate change Discusses the CO2 emissions certification required by ICAO for new aircraft models

Aircraft Design for Reduced Climate Impact Emily Dallara, 2011 Aircraft affect global climate through emissions of greenhouse gases and their precursors and by altering cirrus cloudiness Changes in operations and design of future aircraft may be necessary to meet goals for limiting climate change One method for reducing climate impacts involves designing aircraft to fly at altitudes where the impacts of NOx emissions are less severe and persistent contrail formation is less likely By considering these altitude effects and additionally applying climate mitigation technologies impacts can be reduced by 45 70% with simultaneous savings in total operating costs Uncertainty is assessed demonstrating that relative climate impact savings can be expected despite large scientific uncertainties Strategies for improving climate performance of existing aircraft are also explored revealing potential climate impact savings of 20 40% traded for a 2% increase in total operating costs and reduced maximum range
