**Development of internist patient care with a focus on haematology / oncology and the mortality rate in cancerous diseases in Germany**

Carsten Wittling,2019-04-09 The medical care structures in Germany are the result of a needs planning and control in the outpatient and inpatient service provision Good access distribution optimization as well as high quality of medical services should be attributes which guarantee a future oriented needbased health care to the population But the health care system in Germany is characterized by serious allocation problems This is particularly evident between rural and urban regions as well as between federal states In the area of outpatient care the legislators intervened by passing the GKV Health Care Enhancing Law GKV VSG The concerned federal states are responsible for balancing out the care differences in the inpatient area Internists for hematology oncology are taking up malignant new strains known in common parlance as cancer Their number increased between 2010 and 2014 by 11 7 % The increasing incidence and prevalence rates are the possible drivers of this development Stronger in the outpatient statutory health care than in inpatient service provision Some federal states recorded an increase in this area while other states registered a decrease What is interesting here is federal states with less poverty in which household assets are distributed unequally employ a bigger number of internists for hematology oncology than others This unequal development is not without its consequences Besides age and gender specific differences in mortality from malignant new strains the richer federal states tend to have lower mortality rates The present thesis generates initial results on whether the regional development of internists for hematology oncology could play a role in determining mortality in case of malignant diseases of the blood malignant diseases of the lymph nodes and the lymphatic system as well as malignant solid tumours or their groups Statistical methods will be used to verify or falsify the formulated hypotheses for describable and usable outcomes

*Learning from Nature: How to Design New Implantable Biomaterials: From Biomineralization Fundamentals to Biomimetic Materials and Processing Routes* Rui L. Reis, S. Weiner, 2005-12-29. The development of materials for any replacement or regeneration application should be based on the

thorough understanding of the structure to be substituted This is true in many fields but particularly exigent in substitution and regeneration medicine The demands upon the material properties largely depend on the site of application and the function it has to restore Ideally a replacement material should mimic the living tissue from a mechanical chemical biological and functional point of view Of course this is much easier to write down than to implement in clinical practice Mineralized tissues such as bones tooth and shells have attracted in the last few years considerable interest as natural anisotropic composite structures with adequate mechanical properties In fact Nature is and will continue to be the best materials scientist ever Who better than nature can design complex structures and control the intricate phenomena processing routes that lead to the final shape and structure from the macro to the nano level of living creatures Who can combine biological and physico chemical mechanisms in such a way that can build ideal structure properties relationships Who else than Nature can really design smart structural components that respond in situ to exterior stimulus being able of adapting constantly their microstructure and correspondent properties In the described philosophy line mineralized tissues and biomineralization processes are ideal examples to learn from for the materials scientist of the future

Many authors and publishers also upload their work to specific websites, granting readers access to their content without any charge. These platforms not only provide access to existing literature but also serve as an excellent platform for undiscovered authors to share their work with the world. However, it is essential to be cautious while downloading Fundamentals Of Biomedical Science Haematology Pdf. Some websites may offer pirated or illegally obtained copies of copyrighted material. Engaging in such activities not only violates copyright laws but also undermines the efforts of authors, publishers, and researchers. To ensure ethical downloading, it is advisable to utilize reputable websites that prioritize the legal distribution of content. When downloading Fundamentals Of Biomedical Science Haematology Pdf, users

should also consider the potential security risks associated with online platforms. Malicious actors may exploit vulnerabilities in unprotected websites to distribute malware or steal personal information. To protect themselves, individuals should ensure their devices have reliable antivirus software installed and validate the legitimacy of the websites they are downloading from. In conclusion, the ability to download Fundamentals Of Biomedical Science Haematology Pdf has transformed the way we access information.
