Fuzzy Algebra By Rajesh Kumar :

Fuzzy Algebra Rajesh Kumar, 1993 **Smarandache Fuzzy Algebra** W. B. Vasantha Kandasamy, 2003 The author studies the Smarandache Fuzzy Algebra which like its predecessor Fuzzy Algebra arose from the need to define structures that were more compatible with the real world where the grey areas mattered not only black or white In any human field a Smarandache n structure on a set S means a weak structure w_0 on S such that there exists a chain of proper subsets $P_{n-1} \subset P_{n-2} \subset \dots \subset P_1 \subset S$ whose corresponding structures verify the chain $w_{n-1} \supset w_{n-2} \supset \dots \supset w_1 \supset w_0$ where \supset signifies strictly stronger i.e. structure satisfying more axioms This book is referring to a Smarandache 2 algebraic structure two levels only of structures in algebra on a set S i.e. a weak structure w_0 on S such that there exists a proper subset P of S which is embedded with a stronger structure w_1 Properties of Smarandache fuzzy semigroups groupoids loops bigroupoids biloops non associative rings birings vector spaces semirings semivector spaces non associative semirings bisemirings near rings non associative near ring and binear rings are presented in the second part of this book together with examples solved and unsolved problems and theorems Also applications of Smarandache groupoids near rings and semirings in automaton theory in error correcting codes and in the construction of S subbiautomaton can be found in the last chapter

Groups, Rings And Modules With Applications M.R. Adhikari, A. Adhikari, 2003 **Power Algebras over Semirings** Jonathan S. Golan, 2013-04-17 This monograph is a continuation of several themes presented in my previous books 146-149 In those volumes I was concerned primarily with the properties of semirings Here the objects of investigation are sets of the form RA where R is a semiring and A is a set having a certain structure The problem is one of translating that structure to RA in some natural way As such it tries to find a unified way of dealing with diverse topics in mathematics and theoretical computer science as formal language theory the theory of fuzzy algebraic structures models of optimal control and many others Another special case is the creation of idempotent analysis and similar work in optimization theory Unlike the case of the previous work which rested on a fairly established mathematical foundation the approach here is much more tentative and docimastic This is an introduction to not a definitive presentation of an area of mathematics still very much in the making The basic philosophical problem lurking in the background is one stated succinctly by Hahle and Sostak 185 to what extent basic fields of mathematics like algebra and topology are dependent on the underlying set theory The conflicting definitions proposed by various researchers in search of a resolution to this conundrum show just how difficult this problem is to see in a proper light

Abstract Musical Intervals Ming Tsao, 2007 This book is an introduction to GIS Generalized Interval Systems theory that includes the major results of pitch class theory It provides mathematicians with applications of group theory to music and music theorists with the essential connections between GIS theory and pitch class theory Many of the results in pitch class theory are not addressed by David Lewin such as power functions or the Common Tone Theorem for inversions The book states those results and generalizes them to conform with GIS theory Finally it addresses recent criticisms leveled at pitch class theory and suggests how they can be addressed in GIS theory
