Trends in Software Testing Hrushikesh Mohanty, J. R. Mohanty, Arunkumar Balakrishnan, 2016-07-26 This book is focused on the advancements in the field of software testing and the innovative practices that the industry is adopting. Considering the widely varied nature of software testing, the book addresses contemporary aspects that are important for both academia and industry. There are dedicated chapters on seamless high efficiency frameworks, automation on regression testing, software by search, and system evolution management. There are a host of mathematical models that are promising for software quality improvement by model based testing. There are three chapters addressing this concern. Students and researchers in particular will find these chapters useful for their mathematical strength and rigor. Other topics covered include uncertainty in testing, software security testing, testing as a service, test technical debt, or test debt disruption caused by digital advancement, social media, cloud computing, mobile application, and data analytics, and challenges and benefits of outsourcing. The book will be of interest to students, researchers, as well as professionals in the software industry.

Advanced Solutions in Diagnostics and Fault Tolerant Control Jan M. Kościelny, Michał Syfert, Anna Szytyler, 2017-07-28 This book highlights the latest achievements concerning the theory, methods, and practice of fault diagnostics, fault tolerant systems, and cyber safety. When considering the diagnostics of industrial processes and systems, increasingly important safety issues cannot be ignored. In this context, diagnostics plays a crucial role as a primary measure of the improvement of the overall system safety integrity level. Obtaining the desired diagnostic coverage or providing an appropriate level of inviolability of the integrity of a system is now practically inconceivable without the use of fault detection and isolation methods. Given the breadth and depth of its coverage, the book will be of interest to researchers faced with the challenge of designing technical and medical diagnosis systems, as well as junior researchers and students in the fields of automatic control, robotics, computer science, and artificial intelligence.
