

# OCEANOGRAPHY AND MARINE BIOLOGY

Oceans cover 70 percent of the planet, and their composition has profound impacts on all life on Earth. Oceanographers study the role of oceans in the big picture of Earth's atmosphere and the regions in which oceans regulate life on Earth and vice versa. The oceans can be studied from a variety of perspectives from other disciplines, such as chemistry, physics, geology, meteorology, and more. These perspectives give oceanographers different ways of looking at the vast oceans and help them to discover how different processes take place and make the oceans ecosystem what it is today. Ocean depths are home to the most complex life forms. Over the centuries, the deep waters have given birth to myths, legends, and mysteries that are inexplicable by mankind. On the other hand, marine biology is the study of marine life, right from microorganisms to plants and animals in the ocean and offshore environments. In marine biology, it is closely related to oceanography, and it has a full understanding of marine biology. It is important to have some knowledge of oceanography. Marine Biology's range is quite broad; specializations can be based on a single species, family, behaviour, or ecosystem. For example, marine biologists may choose to study a single species of fish or all fish species that are native to a specific region. This engaging book covers everything examples of how these areas form the foundations for understanding the ocean and marine environment in changing world.
