Abstracting Geographic Information in a Data Rich World Dirk Burghardt, Cécile Duchêne, William Mackaness, 2014-07-08. Research in the field of automated generalisation has faced new challenges in recent years as a result of technological developments in web-based processing, new visualisation paradigms and access to very large volumes of multi-source data generated by sensors and humans. In these contexts, map generalisation needs to underpin on-demand mapping, a form of mapping that responds to individual user requirements in the thematic selection and visualisation of geographic information. It is this new impetus that drives the research of the ICA Commission on Generalisation and Multiple Representation, for example through its annual workshops, biannual tutorials and publications in international journals. This book has a coherent structure, each chapter focusing on core concepts and tasks in the map generalisation towards on-demand mapping. Each chapter presents a state-of-the-art review together with case studies that illustrate the application of pertinent generalisation methodologies. The book addresses issues from data gathering to multi-scaled outputs. Thus, there are chapters devoted to defining user requirements in handling specifications and in the application and evaluation of map generalisation algorithms. It explores the application of generalisation methodologies in the context of growing volumes of data and the increasing popularity of user-generated content.

Cultural Heritage Interpretation: Problems and Proposals for the Medieval Churches in the Walled City of Famagusta, Northern Cyprus Dr. Narmin Babazadeh Asbagh, 2024-12-12. Interpretation has recently become a more focused topic in the cultural heritage conservation field due to the increasing concern about the involvement of the stakeholders and the social pillar of sustainability. As the enhancement of participation of the stakeholders in the conservation processes can be achieved by increasing their awareness and appreciation of cultural heritage sites, interpretation has a considerable role in this process. This research aims to search for methods for developing interpretation approaches for cultural heritage sites through the assessment of the responses of the stakeholders. The churches of the Walled City of Famagusta have been chosen as the case study for this research due to the apparent interpretation problems. Assessment of the responses of the stakeholders is accepted as a tool for developing a better interpretation of the cultural heritage buildings, preventing them from further neglect or possible extinction. This research proposes the advancement of interpretive approaches for similar undervalued and underappreciated sites. There are many abandoned heritage buildings worldwide and due to the lack of function and maintenance, they deteriorate easily and are ruined. Similarly, abandoned valuable religious buildings have faced vandalism deliberately because of the decreasing demand for use or lack of their communities, and many of them have been insufficiently interpreted for their visitors. This research aims to develop an interpretive plan for the churches in the Walled City of Famagusta to overcome their current problems. I
