Mathematical and Computational Approaches in Advancing Modern Science and Engineering Jacques Bélair, Ian A. Frigaard, Herb Kunze, Roman Makarov, Roderick Melnik, Raymond J. Spiteri, 2016-08-10. Focusing on five main groups of interdisciplinary problems, this book covers a wide range of topics in mathematical modeling, computational science and applied mathematics. It presents a wealth of new results in the development of modeling theories and methods advancing diverse areas of applications and promoting interdisciplinary interactions between mathematicians, scientists, engineers and representatives from other disciplines. The book offers a valuable source of methods, ideas and tools developed for a variety of disciplines including the natural and social sciences, medicine, engineering and technology. Original results are presented on both the fundamental and applied level, accompanied by an ample number of real world problems and examples emphasizing the interdisciplinary nature and universality of mathematical modeling and providing an excellent outline of today's challenges. Mathematical modeling with applied and computational methods and tools plays a fundamental role in modern science and engineering. It provides a primary and ubiquitous tool in the context making new discoveries as well as in the development of new theories and techniques for solving key problems arising in scientific and engineering applications. The contributions, which are the product of two highly successful meetings held jointly in Waterloo, Ontario, Canada, on the main campus of Wilfrid Laurier University in June 2015, i.e. the International Conference on Applied Mathematics, Modeling and Computational Science and the Annual Meeting of the Canadian Applied and Industrial Mathematics (CAIMS), make the book a valuable resource for any reader interested in a broader overview of the methods, ideas and tools involved in mathematical and computational approaches developed for other disciplines including the natural and social sciences, engineering and technology.

Gas-Phase Combustion Chemistry W.C., Jr. Gardiner,2012-12-06 This book differs from its out of print 1984 predecessor primarily by lacking theoretical chapters on combustion modeling and elementary reaction rate coefficients While noteworthy advances in these subjects have been made since 1984 it was decided to mention theory in this book only where appropriate in chapters describing combustion chemistry itself Otherwise space limitation would have forced us to discuss only new developments in theoretical areas thereby abandoning our goal of keeping this book readable by newcomers to the field of combustion modeling Contemporary modeling and rate coefficient theory as applied to combustion deserve a book of their own A second omission is a chapter devoted to reviewing the elementary reactions that contribute to the combustion chemistry of hydrogen carbon monoxide and hydrocarbon or alternate fuels Readers looking for guidance to the current knowledge we have in this area will find a broad outline and extensive references to the review and archival literature in Chapter 1 where the essential features of combustion chemistry modeling are surveyed *NBS Special Publication* ,1980
