Nanoparticles in Modern Antimicrobial and Antiviral Applications Varaprasad Kokkarachedu, Rotimi Sadiku, 2024-02-27

Nanotechnology based nanomaterials have revolutionized the field of advanced medical applications by offering new possibilities for treatment and diagnosis. Nano form materials have become increasingly important in modern healthcare due to their ability to improve bioactivity and therapeutic efficiency. For example, nanomaterials can target specific cells or tissues in the body which can result in more effective treatments with fewer side effects. However, it is important to carefully control the toxicity of nanomedicine and study its potential toxic effects to ensure patient safety. Moreover, nanomaterials have shown promise in controlling various types of bacteria, viruses, and even SARS-CoV-2. Their small size and unique properties make them effective tools for combating infectious diseases. This book, Nanoparticles in Modern Antimicrobial and Antiviral Applications, aims to address key issues related to nanoparticles and their potential applications in healthcare. The book covers topics such as encapsulated polymer systems and their potential applications in COVID-19 treatment, which are not commonly found in other books. As such, it is a valuable resource for those interested in this field and can provide new insights into the use of nanomaterials for medical applications.

Advanced Nanomaterials and Their Applications Bikash Sharma, Chandan Kumar Sarkar, 2023-12-13. This book covers various facets of nanomaterials and their applications, including low-dimensional materials along with discussions on in vitro cell imaging, bioanalyses, UV laser applications of scheelite-type nanomaterials, and nanosized cyanobridged metal-organic frameworks including high-spin transition metal ions. It explains transition metal dichalcogenides and magnetic tunnel junction devices as an alternative to complementary metal oxide semiconductors. One of the main aims of this book is to grow interest in the atomistic simulation process and characterization of these nanoscale devices. Details the recent advances in the application of nanomaterials for nanoelectronics, devices, sensors, and memories. Describes the first principles approach to ultrasensitive electrically doped biosensors. Discusses the application of nanomaterials in spintronic devices, specifically magnetic tunnel junction devices with new architectures. Covers nanomaterials in water purification and conducting polymer nanocomposites in electrochemical supercapacitors. Presents the theoretical background of next-generation MRI contrast agents with nanosized cyanobridged metal-organic frameworks including high-spin transition metal ions. This book is aimed at researchers and graduate students of materials engineering and nanoelectronics.

Nanotechnology for Environmental Remediation Sung Hee Joo, Frank Cheng, 2006-06-18. The book examines the suitability of nanoscale zero-valent iron (ZVI) for degradation of agrochemicals for the purpose of developing a cost-effective treatment technology. It identifies by-products produced from the ZVI-mediated degradation process of particular contaminants and clarifies the reaction mechanism by which ZVI degrades a chosen contaminant. It also assesses how the ZVI-based technology may be applied in complex natural systems, the

limitations to implementation and possible avenues for further research which might improve the viability of the process
