Physics Methods in Archaeometry Società italiana di fisica, 2004 The role of exact sciences in connection with cultural heritage now is well established and a new scientific branch has been generated Archaeometry Literally Archaeometry means measurement on ancient objects It is a multidisciplinary field of Investigations where the rigorous methods of exact sciences give a fundamental contribution to solving the problems associated with conservation and restoration as well as to the study itself of the cultural heritage Archaeometry as a scientific research field involves interdisciplinary groups formed by scholars of the humanistic area together with scientists physicists chemists mathematicians biologists engineers etc The primary justification for the need of involving exact sciences in the field which in the past traditionally has been exclusive of Art Historians must no doubt be found in the conservation and restoration activities The second argument which in the public opinion justifies the involvement of science with the world of Art is the confidence that scientific methods are Infallible in unmasking forgeries But in our opinion the awareness of the central role of scientific methods as a support for philological and

Atmospheric Thermodynamics Julio V. Iribarne, W.L. Godson, 1981-07-31 The thermodynamics of the atmosphere is the subject of several chapters in most textbooks on dynamic meteorology but there is no work in English to give the subject a specific and more extensive treatment In writing the present textbook we have tried to fill this rather remarkable gap in the literature related to atmospheric sciences Our aim has been to provide students of meteorology with a book that can play a role similar to the textbooks on chemical thermodynamics for the chemists This implies a previous knowledge of general thermodynamics such as students acquire in general physics courses therefore although the basic principles are reviewed in the urst four chapters they are only briefly discussed and emphasis is laid on those topics that will be useful in later chapters through their application to atmospheric problems No attempt has been made to introduce the thermodynamics of irreversible processes on the other hand consideration of heterogeneous and open homogeneous systems permits a rigorous formulation of the thermodynamic functions of clouds exclusive of any consideration of microphysical effects and a better understanding of the approx imations usually implicit in practical applications
