Cybernetic Trading Strategies Murray A. Ruggiero, 1997-07-01

The computer can do more than show us pretty pictures. It can optimize, backtest, prove, or disprove old theories, eliminate the bad ones, and make the good ones better. *Cybernetic Trading Strategies* explores new ways to use the computer and finds ways to make a valuable machine even more valuable.

Foreword by John J. Murphy

Until recently, the computer has been used almost exclusively as a charting and data gathering tool. But as traders and analysts have quickly discovered, its capabilities are far more vast. Now in this groundbreaking new book, Murray Ruggiero, a leading authority on cybernetic trading systems, unlocks their incredible potential and provides an in-depth look at the growing impact of advanced technologies on intermarket analysis.

A unique resource, *Cybernetic Trading Strategies* provides specific instructions and applications on how to develop tradable market timing systems using neural networks, fuzzy logic, genetic algorithms, chaos theory, and machine induction methods. Currently utilized by some of the most powerful financial institutions in the world, including John Deere and Fidelity Investments, today's advanced technologies go beyond subjective interpretations of market indicators to enhance traditional analysis. As a result, existing trading systems gain a competitive edge. Ruggiero reveals how incorporating elements of statistical analysis, spectral analysis, neural networks, genetic algorithms, fuzzy logic, and other high-tech concepts into a traditional technical trading system can greatly improve the performance of standard trading systems. For example, spectral analysis can be used to detect when a market is trending earlier than classical indicators such as ADX.

Drawing on his extensive research on market analysis, Ruggiero provides an incisive overview of cyber systems that when applied correctly can increase trading returns by as much as 200% to 300%.

The author covers a wide range of important topics, examining classical technical analysis methodologies and seasonal trading, as well as statistically based market prediction and the mechanization of subjective methods such as candlestick charts and the Elliott Wave. Precise explanations and dozens of real-world examples show you how to incorporate advanced technologies into classical technical analysis methodologies. Identify which of these technologies have the most market applicability. Build trading systems to maximize reliability and profitability based on your own risk/reward criteria. Most importantly, *Cybernetic Trading*

Strategies takes you step by step through system testing and evaluation a crucial step for controlling risk and managing money With up to date information from one of the field s leading authorities Cybernetic Trading Strategies is the definitive guide to developing implementing and testing today s cutting edge computer trading technologies *Designing Stock Market Trading Systems* Bruce Vanstone, Tobias Hahn, 2010-08-23 Most people know there is potential to make big money in the stock market but they don t know how to get started This work guides readers step by step through the authors methods for building rule based stock market trading systems The New Technology of Financial Management Dimitris N.
