

11. Draw a pedigree that represents Leah married to Aiden, with 2 sons and 1 daughter. Their son, Scott, married April and had Sutton (a boy) and Kendall (a girl). Their daughter, Karen, married Harry and had Eli (a son) and Tariq (a son). Please label the pedigree with the names of the people.

12. When working through a pedigree, the first thing you need to do is figure out which characteristic is dominant – the shaded one or the un-shaded one. Then you need to choose a letter (let's use A) and begin assigning genotypes. Remember that recessive individuals are always homozygous, so assign their genotypes first. Then go back and look at all of the dominant individuals. For some, you will only be able to determine one allele of the genotype, so just write the one capital allele followed by a question mark (A?).

a. Which characteristic is dominant?

black

b. Which characteristic is recessive?

white

c. Determine the genotypes of all individuals. You will have three "A?". Write your Genotypes beneath each individual.

Identify the following pedigree charts as autosomal, X-linked, recessive, and dominant. Please explain your answer.

13. Is the following autosomal or X-linked? Is it dominant or recessive? Please explain.

X-linked recessive

More males affected than females

Offspring show disorder/trait but parents don't

14. Is the following autosomal or X-linked? Is it dominant or recessive? Please explain.

autosomal dominant

50% of males & 50% of females affected

Both parents & offspring show trait

15. Is the following autosomal or X-linked? Is it dominant or recessive? Please explain.

X-linked recessive

See reasons in question #13

16. If a child has an autosomal dominant trait, what can you say about the parents?

If the child has the disorder then one of the parents must have the disorder.

Quantitative Genetics Shizhong Xu, 2022-01-19 The intended audience of this textbook are plant and animal breeders upper level undergraduate and graduate students in biological and agricultural science majors Statisticians who are interested in understanding how statistical methods are applied to genetics and agriculture can benefit substantially by reading this book One characteristic of this textbook is represented by three chapters of technical reviews for Mendelian genetics population genetics and preliminary statistics which are prerequisites for studying quantitative genetics Numerous examples are provided to illustrate different methods of data analysis and estimation of genetic parameters Along with each example of data analyses is the program code of SAS statistical analysis system Ending the Mendel-Fisher Controversy Allan Franklin, A.W.F. Edwards, Daniel J. Fairbanks, Daniel L. Hartl, Teddy Seidenfeld, 2008-03-15 In 1865 Gregor Mendel presented Experiments in Plant Hybridization the results of his eight year study of the principles of inheritance through experimentation with pea plants Overlooked in its day Mendel s work would later become the foundation of modern genetics Did his pioneering research follow the rigors of real scientific inquiry or was Mendel s data too good to be true the product of doctored statistics In Ending the Mendel Fisher Controversy leading experts present their conclusions on the legendary

controversy surrounding the challenge to Mendel's findings by British statistician and biologist R A Fisher. In his 1936 paper 'Has Mendel's Work Been Rediscovered?' Fisher suggested that Mendel's data could have been falsified in order to support his expectations. Fisher attributed the falsification to an unknown assistant of Mendel's. At the time, Fisher's criticism did not receive wide attention. Yet beginning in 1964, about the time of the centenary of Mendel's paper, scholars began to publicly discuss whether Fisher had successfully proven that Mendel's data was falsified. Since that time, numerous articles, letters, and comments have been published on the controversy. This self-contained volume includes everything the reader will need to know about the subject: an overview of the controversy, the original papers of Mendel and Fisher, four of the most important papers on the debate, and new updates by the authors of the latter four papers. Taken together, the authors contend these voices argue for an end to the controversy, making this book the definitive last word on the subject. *Thicker Than Blood* Tukufu Zuberi, 2001. Tukufu Zuberi offers a concise account of the historical connections between the development of the idea of race and the birth of social statistics. Zuberi describes the ways race differentiated data is misinterpreted in the social sciences and asks searching questions about the ways racial statistics are used. He argues that statistical analysis can and must be deracialized and that this deracialization is essential to the goal of achieving social justice for all. **Genetics**, 1966

Werner-Felmayer, 2016-04-22. Recent debate about the ethical and regulatory dimensions of developments in genetics has sidelined societal and cultural aspects which arguably are indispensable for a nuanced understanding of the complexities of the topic. Regulatory and ethical debates benefit from taking seriously this third dimension of culture which often determines the configurations and limits of the space within which scientific, ethical, and legal debate can take place. To fill this gap, this volume brings together contributions exploring the mutual relationships between genetics, markets, societies, and identities in genetics and genomics. It draws upon the recent transdisciplinary debate on how socio-cultural factors influence understandings of genetics and shows how individual and collective identities are challenged or reinforced by cultural meanings and practices of genetics. This book will become a standard reference for everyone seeking to make sense of the controversies and shifts in the field of genetics in the second decade of the twenty-first century.
