Sense of Agency: Examining Awareness of the Acting Self Nicole David, James W Moore, Sukhvinder Obhi, 2015-07-24 The sense of agency is defined as the sense of oneself as the agent of one s own actions This also allows oneself to feel distinct from others and contributes to the subjective phenomenon of self consciousness Gallagher 2000 Distinguishing oneself from others is arguably one of the most important functions of the human brain Even minor impairments in this ability profoundly affect the individual s functioning in society as demonstrated by psychiatric and neurological syndromes involving agency disturbances Della Sala et al 1991 Franck et al 2001 Frith 2005 Sirigu et al 1999 But the sense of agency also plays a role for cultural and religious phenomena such as voodoo superstition and gambling in which individuals experience subjective control over objectively uncontrollable entities Wegner 2003 Furthermore it plays into ethical and law questions concerning responsibility and guilt For these reasons a better understanding of the sense of agency has been important for neuroscientists clinicians philosophers of mind and the general society alike Significant progress has been made in this regard For example philosophical scrutiny has helped establish the conceptual boundaries of the sense of agency Bayne 2011 Gallagher 2000 2012 Pacherie 2008 Synofzik et al 2008 and scientific investigations have shed light on the neurocognitive basis of sense of agency including the brain regions supporting sense of agency Chambon et al 2013 David et al 2007 Farrer

et al 2003 2008 Spengler et al 2009 Tsakiris et al 2010 Yomogida et al 2010 Despite this progress there remain a number of outstanding questions such as Are there cross cultural differences in the sense of agency How does the sense of agency develop in infants or change across the lifespan How does social context influence sense of agency What neural networks support sense of agency i e connectivity and communication between brain regions What are the temporal dynamics with respect to neural processes underlying the sense of agency i e the what and when of agency processing How can different cue models of the sense of agency be further specified and empirically supported especially with regards to cue integration weighting What are the applications of sense of agency research clinically engineering etc The concept of the sense of agency offers intriguing avenues for knowledge transfer across disciplines and interdisciplinary empirical approaches especially in addressing the afore mentioned outstanding questions The aim of the present research topic is to promote and facilitate such interdisciplinarity for a better understanding of why and how we typically experience our own actions so naturally and undoubtedly as ours and what goes awry when we do not We thus welcome contributions from for example i neuroscience and psychology including development psychology neuroscience ii psychiatry and neurology iii philosophy iv robotics and v computational modeling In addition to empirical or scientific studies of the sense of agency we also encourage theoretical contributions including reviews models and opinions

Handbook of Pediatric Neuropsychology Andrew S. Davis, 2010-10-25 By far the most comprehensive and detailed coverage of pediatric neuropsychology available in a single book today Davis provides coverage of basic principles of pediatric neuropsychology but overall the work highlights applications to daily practice and special problems encountered by the pediatric neuropsychologist Cecil R Reynolds PhD Texas A M University The breadth and depth of this body of work is impressive Chapters written by some of the best researchers and authors in the field of pediatric neuropsychology address every possible perspective on brain behavior relationships culminating in an encyclopedic text This book reflects how far and wide pediatric neuropsychology has come in the past 20 years and the promise of how far it will go in the next Elaine Fletcher Janzen EdD NCSP ABPdN The Chicago School of Professional Psychology it would be hard to imagine a clinical situation in pediatric neuropsychology in which this book would fail as a valuable resource Archives of Clinical Neuropsychology I believe there is much to recommend this hefty volume It is a solid reference that I can see appreciating as a resource as I update my training bibliography Journal of the International Neuropsychological Society This landmark reference covers all aspects of pediatric neuropsychology from a research based perspective while presenting an applied focus with practical suggestions and guidelines for clinical practice Useful both as a training manual for graduate students and as a comprehensive reference

for experienced practitioners it is an essential resource for those dealing with a pediatric population This handbook provides an extensive overview of the most common medical conditions that neuropsychologists encounter while dealing with pediatric populations It also discusses school based issues such as special education law consulting with school staff and reintegrating children back into mainstream schools It contains over 100 well respected authors who are leading researchers in their respective fields Additionally each of the 95 chapters includes an up to date review of available research resulting in the most comprehensive text on pediatric neuropsychology available in a single volume Key Features Provides thorough information on understanding functional neuroanatomy and development and on using functional neuroimaging Highlights clinical practice issues such as legal and ethical decision making dealing with child abuse and neglect and working with school staff Describes a variety of professional issues that neuropsychologists must confront during their daily practice such as ethics multiculturalism child abuse forensics and psychopharmacology

Brain Mechanisms in Problem Solving and Intelligence Robert Thompson, Francis M. Crinella, Jen Yu, 2013-11-21 This book is the outcome of a decade of research on the neuroanatomical mechanisms of learning in the young laboratory rat It is essentially a discourse on the functional organization of the brain in relation to problem solving ability and intelligence During the period between 1980 and 1989 well over 1000 weanling albino rats were subjected to localized brain damage or sham operations in the case of the controls under deep anesthesia and aseptic surgical conditions were allowed to recover and subsequently were tested on a wide variety of problems designed to measure general learning ability Since virtually every part of the brain rostral to the medulla has been explored with lesions it has become possible not only to map a number of putative brain systems underlying the acquisition of distinctive problem solving tasks but to isolate several neuroanatomical mechanisms that appear to be selectively involved in the acquisition of particular kinds of goal directed learned activities Of particular interest was the discovery of a nonspecific mechanism previously referred to in our research reports as the general learning system inhabiting the interior parts of the brain One objective of this volume was to make these maps available in a single source Another was to provide a description of learning syndromes arising from local lesions to different parts of the brain
