Modeling Intraindividual Variability With Repeated Measures Data Scott L. Hershberger, D.S. Moskowitz, 2013-06-17 This book examines how individuals behave across time and to what degree that behavior changes fluctuates or remains stable It features the most current methods on modeling repeated measures data as reported by a distinguished group of experts in the field The goal is to make the latest techniques used to assess intraindividual variability accessible to a wide range of researchers Each chapter is written in a user friendly style such that even the novice data analyst can easily apply the techniques Each chapter features a minimum discussion of mathematical detail an empirical example applying the technique and a discussion of the software related to that technique Content highlights include analysis of mixed multi level structural equation and categorical data models It is ideal for researchers professionals and students working with repeated measures data from the social and behavioral sciences business or biological sciences

Multilevel Models Jichuan Wang, Haiyi Xie, James F. Fisher, 2011-12-23 Interest in multilevel statistical models for social science and public health studies has been aroused dramatically since the mid 1980s New multilevel modeling techniques are giving researchers tools for analyzing data that have a hierarchical or clustered structure Multilevel models are now applied to a wide range of studies in sociology population studies education studies psychology economics epidemiology and public health This book covers a broad range of topics about multilevel modeling The goal of the authors is to help students and researchers who are interested in analysis of multilevel data to understand the basic concepts theoretical frameworks and

application methods of multilevel modeling The book is written in non mathematical terms focusing on the methods and application of various multilevel models using the internationally widely used statistical software the Statistics Analysis System SAS Examples are drawn from analysis of real world research data The authors focus on twolevel models in this book because it is most frequently encountered situation in real research These models can be readily expanded to models with three or more levels when applicable A wide range of linear and non linear multilevel models are introduced and demonstrated

Analysis of Repeated Measures Martin J. Crowder, David J. Hand, 2017-10-24 Repeated measures data arise when the same characteristic is measured on each case or subject at several times or under several conditions There is a multitude of techniques available for analysing such data and in the past this has led to some confusion This book describes the whole spectrum of approaches beginning with very simple and crude methods working through intermediate techniques commonly used by consultant statisticians and concluding with more recent and advanced methods Those covered include multiple testing response feature analysis univariate analysis of variance approaches multivariate analysis of variance approaches regression models two stage line models approaches to categorical data and techniques for analysing crossover designs The theory is illustrated with examples using real data brought to the authors during their work as statistical consultants
