Design of Steel-Concrete Composite Bridges to Eurocodes Ioannis Vayas, Aristidis Iliopoulos, 2013-08-29 Combining a theoretical background with engineering practice *Design of Steel Concrete Composite Bridges to Eurocodes* covers the conceptual and detailed design of composite bridges in accordance with the Eurocodes Bridge design is strongly based on prescriptive normative rules regarding loads and their combinations safety factors material properties analysis methods required verifications and other issues that are included in the codes Composite bridges may be designed in accordance with the Eurocodes which have recently been adopted across the European Union This book centers on the new design rules incorporated in the EN versions of the Eurocodes The book addresses the design for a majority of composite bridge superstructures and guides readers through the selection of appropriate structural bridge systems It introduces the loads on bridges and their combinations proposes software supported analysis models and outlines the required verifications for sections and members at ultimate and serviceability limit states including fatigue and plate buckling as well as seismic design of the deck and the bearings It presents the main types of common composite bridges discusses structural forms and systems and describes preliminary design aids and erection methods It provides information on railway bridges but through the design examples makes road bridges the focal point This text includes several design examples within the chapters

explores the structural details summarizes the relevant design codes discusses durability issues presents the properties for structural materials concentrates on modeling for global analysis and lays down the rules for the shear connection It presents fatigue analysis and design fatigue load models detail categories and fatigue verifications for structural steel reinforcement concrete and shear connectors It also covers structural bearings and dampers with an emphasis on reinforced elastomeric bearings The book is appropriate for structural engineering students bridge designers or practicing engineers converting from other codes to Eurocodes *Designers' guide to EN 1992-2* C. R. Hendy, D. A. Smith, 2007 **Designers' Guide to Eurocode 4: Design of Composite Structures EN 1994-2** Chris R Hendy, Roger P. Johnson, 2006-08-23 EN 1994 2 is one standard of the Eurocode suite describes the principles requirements for safety serviceability durability of composite steel concrete bridges This guide provides the user with guidance on the interpretation use of EN 1994 2 through worked examples in relation to the general rules the rules for bridges *Guidelines for the Design of Footbridges* fib Fédération internationale du béton, 2005-01-01 The intention of fib Bulletin 32 is to present guidelines for the design of footbridges as well as bridges accommodating cyclists and bridleways equestrian paths The need for these guidelines comes from the fact that structural engineers designing footbridges currently have to spend considerable time and energy collecting information from numerous documents codes and recommendations to make design decisions There seems to be no international document dedicated solely to the design of footbridges These guidelines attempt to provide a concentrated source of information regarding all design issues specific to footbridges It is meant to be a liberal document in the sense that it promotes new innovative and bold yet prudent designs by sharing the experience of the authors summarizing specifications given in codes and presenting a collection of examples of well designed structures or structural details from around the world It is not intended to be an international code that specifies limits and admissible values thus encouraging timid conservative designs that are repetitions of approved and tested designs Indeed it may be the very fact that no international code exists specifically for footbridges that encourages the wide variety of footbridge designs found today It should be noted that numerous guidelines codes and books have been published on bridge design in general Information given in those publications that is also applicable to footbridges is not repeated in Bulletin 32 The chapters of these guidelines all follow the same pattern an introduction to the subject general guidelines as well as do's and don'ts a summary of information found in existing international codes recommendations experience of the authors and built examples with comparison and comments on this information examples Plenty of illustrations and photographs help to visualize the themes of this work The last chapter Case Studies contains footbridges each with a short summary of main structural data and references for further reading **Precast Concrete Bridges** fib Fédération internationale du béton, 2004-01-01 This report was drafted by fib Task Group 6.4 Precast bridges Jos Calavera Convenor Spain Andr De Chefdebien CERIB France David Fernandez Ord ez Prefabricados Castelo S A Spain Secretary Antonello Gasperi Consulting engineer Italy Jorge Ley INTEMAC Spain Fritz M
