Advanced Information Networking and Applications

Leonard Barolli, 2025-05-17 Networks of today are going through a rapid evolution and there are many emerging areas of information networking and their applications. Heterogeneous networking supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing, communications, intelligence and actuations are emerging as a critically important disruptive computer class based on a new platform networking structure and interface that enable novel low cost and high volume applications. Several of such applications have been difficult to realize because of many interconnection problems. To fulfill their large range of applications different kinds of networks need to collaborate and wired and next generation wireless systems should be integrated in order to develop high performance computing solutions to problems arising from the complexities of these networks. This volume covers the theory, design and applications of computer networks, distributed computing and information systems. The aim of the volume *Advanced Information Networking and Applications* is to provide latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications.

that attempt to determine and perhaps even shape the future of software architecture research. It contains a distillation of the outputs from several ICSA 2022 working sessions and the subsequent work from the authors. Software architecture research involves the study of the design and analysis of software systems focusing on the high level structure and organization of software components as well as the interactions and relationships between them. It also focuses on the non technical aspects of software design: how teams are organized and how they communicate and work together. The first three chapters of the book investigate software architecture for emerging classes of software systems with widespread interest including quantum computing, artificial intelligence centric systems and systems within value based ecosystems. Subsequent chapters investigate the role of architecture in relation to modern development processes, sharing of data as an enabler for furthering research in software architecture and teaching software architecture. In summary, this book provides an overview of the latest research and directions in software architecture covering a wide array of current and emerging topics. Specifically, this book is a valuable resource for researchers and students to aid them in identifying fruitful paths for future research.
