Principles of Computational Modelling in Neuroscience David Sterratt,Bruce Graham,Andrew Gillies,David Willshaw,2011-06-30 The nervous system is made up of a large number of interacting elements To understand how such a complex system functions requires the construction and analysis of computational models at many different levels This book provides a step by step account of how to model the neuron and neural circuitry to understand the nervous system at all levels from ion channels to networks Starting with a simple model of the neuron as an electrical circuit gradually more details are added to include the effects of neuronal morphology synapses ion channels and intracellular signalling The principle of abstraction is explained through chapters on simplifying models and how simplified models can be used in networks This theme is continued in a final chapter on modelling the development of the nervous system Requiring an elementary background in neuroscience and some high school mathematics this textbook is an ideal basis for a course on computational neuroscience   Cultural Differences in Human-Computer Interaction Rüdiger Heimgärtner,2012-11-21 Es wird eine Methode zur Bestimmung von quantitativ klassifizierenden kulturellen Variablen der Mensch Maschine Interaktion MMI pr sentiert und in einem Werkzeug f r die interkulturelle Interaktionsanalyse umgesetzt R diger Heimg rtner zeigt dass MMI anhand der kulturell gepr gten Interaktionsmuster des Benutzers automatisch an dessen kulturellen Hintergrund angepasst werden kann Empfehlungen f r das Design interkultureller Benutzungsschnittstellen sowie f r die Architekturbildung kulturell adaptiver Systeme runden die Arbeit ab Der Arbeitsbericht der Dissertation ist in elektronischer Form auf der IUIC WebSite www iuic de ver ffentlicht Nach Registrierung unter Projekte Projects und Best tigung der Aktivierungs Email k nnen K ufer den Arbeitsbericht einsehen   **Genetic Programming** Miguel Nicolau,Krzysztof Krawiec,Malcolm I. presents selected new developments in such areas of dependability research as system modelling tools and methodologies for system analysis data security secure system design and specific dependability aspects in specialized technical applications Many practical cases illustrate the universal rule that complexity and multiplicity of system processes their concurrency and their reliance on embedded intelligence human and artificial significantly impedes construction of strict mathematical models and calls for application of intelligent and soft computing methods
