Fault-Tolerant Parallel and Distributed Systems Dimiter R Avresky, David R Kaeli, 1998-01-01 **Fault-Tolerant Distributed Computing** Barbara Simons, Alfred Spector, 1990-11-16 The goal of the Asilomar Workshop on Fault Tolerant Distributed Computing held March 17 19 1986 was to facilitate interaction between theoreticians and practitioners by inviting speakers and choosing topics so as to present a broad overview of the field This volume contains 22 papers stemming from the workshop most of them revised and rewritten presenting research results in distributed systems and fault tolerant architectures and systems The volume should be of use to students researchers and developers *Structural Failure Models for Fault-Tolerant Distributed Computing* Timo Warns, 2011-01-28 Timo Warns has developed tractable fault models that while being non probabilistic are accurate for dependent and propagating faults Using seminal problems such as consensus and constructing coterie he demonstrates how the new models can be used to design and evaluate effective and efficient means of fault tolerance Fault-Tolerant Message-Passing Distributed Systems Michel Raynal, 2018-09-08 This book presents the most important fault tolerant distributed programming abstractions and their associated distributed algorithms in particular in terms of reliable communication and agreement which lie at the heart of nearly all distributed applications These programming abstractions distributed objects or services allow software designers and programmers to cope with asynchrony and the most important types of failures such as process crashes message losses and malicious behaviors of computing entities widely known under the term Byzantine fault tolerance The author introduces these notions in an incremental manner starting from a clear specification followed by algorithms which are first described intuitively and then proved correct The book also presents impossibility results in classic distributed computing models along with strategies mainly failure detectors and randomization that allow us to enrich these models In this sense the book constitutes an introduction to the science of distributed computing with applications in all domains of distributed systems such as cloud computing and blockchains Each chapter comes with exercises and bibliographic notes to help the reader approach understand and master the fascinating field of fault tolerant distributed computing Fault-tolerant Distributed Computing Barbara Simons, Alfred Z. Spector, 1990 **Responsivität** Matthias Werner, 2000 *Kommunikation in Verteilten Systemen* Nina Gerner, Heinz-Gerhard Hegering, Joachim Swoboda, 2013-03-12 **Performance and Dependability of Fault-tolerant Distributed Systems** Andreas Brenner, 1996 **Distributed Applications and Interoperable Systems** Twittie Senivongse, Rui Oliveira, 2009-06-04 This book constitutes the refereed proceedings of the 9th IFIP WG 6.1 International Conference on Distributed Applications and Interoperable Systems DAIS 2009 held in Lisbon Portugal in June 2009 The DAIS conference was held as part of the federated event on Distributed Computing Techniques DisCoTec together with the 11th International Conference on Coordination Models and Languages Coordination 2009 and the IFIP WG 6.1 International Conference on Formal Techniques for Distributed Systems FMOODS FORTE 2009 The 12 revised full papers

presented were carefully reviewed and selected from 32 submissions. The papers address service orientation, quality of service and service contract, business processes, Web services, service components, algorithms and protocols supporting dependability, fault tolerance, data replication, group communication, adaptive and collaborative systems, context awareness, model driven development, middleware for ubiquitous computing and sensor networks, ad hoc network protocols, peer to peer systems and overlays. They are organized in topical sections: peer to peer networks, ad hoc networks, dependability and infrastructure and services.

Understanding fault-tolerant distributed systems Cristian Flaviu, 1990 Distributed Systems for System Architects Paulo Veríssimo, Luís Rodrigues, 2001-01-31. The primary audience for this book are advanced undergraduate students and graduate students. Computer architecture as it happened in other fields such as electronics evolved from the small to the large that is it left the realm of low level hardware constructs and gained new dimensions as distributed systems became the keyword for system implementation. As such the system architect today assembles pieces of hardware that are at least as large as a computer or a network router or a LAN hub and assigns pieces of software that are self contained such as client or server programs, Java applets or protocol modules to those hardware components. The freedom she/he now has is tremendously challenging. The problems alas have increased too. What was before mastered and tested carefully before a fully fledged mainframe or a closely coupled computer cluster came out on the market is today left to the responsibility of computer engineers and scientists. Invested in the role of system architects who fulfil this role on behalf of software vendors and integrators add value system developers, R D institutes and final users. As system complexity size and diversity grow so increases the probability of inconsistency, unreliability, non responsiveness and insecurity not to mention the management overhead. What System Architects Need to Know. The insight such an architect must have includes but goes well beyond the functional properties of distributed systems.

Synchronisation in Mehrrechner-Datenbanksystemen Erhard Rahm, 2013-03-07. Das Buch behandelt in systematischer und praxisorientierter Weise den Entwurf sowie die Leistungsbewertung von Synchronisationsverfahren in Mehrrechner Datenbanksystemen. Nach einer Klassifikation von Mehrrechner Datenbanksystemen werden zunächst die wichtigsten Synchronisationstechniken für zentralisierte und verteilte Datenbanksysteme dargestellt und miteinander verglichen. Im Mittelpunkt der Überlegungen stehen dann geeignete Synchronisationskonzepte wie Sperrverfahren und optimistische Protokolle für sogenannte DB Sharing Systeme, welche eine allgemeine Mehrrechnerarchitektur zur Realisierung von Hochleistungs Transaktionssystemen verkörpern. Für DB Sharing werden neben der Realisierung der Synchronisationskomponente auch für neue Anforderungen bezüglich Systempufferverwaltung, Logging, Recovery und Lastkontrolle koordinierte Leistungsmöglichkeiten angegeben. Zur quantitativen und realitätsnahen Leistungsanalyse von sechs Synchronisationsprotokollen wurde ein Trace getriebenes Simulationssystem entwickelt, in dem alle wesentlichen Komponenten eines Mehrrechner Datenbanksystems detailliert berücksichtigt sind. Das Buch gibt einen fundierten Überblick über den Stand der Wissenschaft im Bereich der Synchronisation in

zentralisierten und Mehrrechner Datenbanksystemen und zeigt neue Techniken zur Realisierung künftiger Hochleistungs Transaktionssysteme auf **Dependable Computing - EDDC-3** Jan Hlavicka,Erik Maehle,Andras Pataricza,2003-06-26

The idea of creating the European Dependable Computing Conference EDCC was born at the moment when the Iron Curtain fell A group of enthusiasts who were previously involved in research and teaching in the field of fault tolerant computing in different European countries agreed that there is no longer any point in keeping previously independent activities apart and created a steering committee which took the responsibility for preparing the EDCC calendar and appointing the chairs for the individual conferences There is no single European or global professional organization that took over the responsibility for this conference but there are three national interest groups that sent delegates to the steering committee and support its activities especially by promoting the conference materials As can be seen from these materials they are the SEE Working Group Dependable Computing which is a successor organization of AFCET in France the GI ITG
