Fertigation Management In Greenhouse Hydroponics Wur:

Plant Nutrition of Greenhouse Crops Cees Sonneveld, Wim Voegt, 2009-09-18 Greenhouse cultivation is noted for its high uptake of minerals consistent climatic conditions exclusion of natural precipitation and control of salt accumulation Acknowledging that plant nutrition in greenhouse cultivation differs in many essentials from field production this volume details specific information about testing methods for soils and substrates in a greenhouse environment It does so while offering a universally applicable analysis This is based on the composition of the soil and substrate solutions methods for the interpretation of tissue tests and crop responses on salinity and water supply in relation to fertilizer application Fertilizer additions related to analytical data of soil and substrate samples are presented for a wide range of vegetable and ornamental crops The subject is especially apt now as substrate growing offers excellent possibilities for the optimal use of water and nutrients as well as the potential for sustainable production methods for greenhouse crops Soilless Culture: Theory and Practice Michael Raviv, J. Heinrich Lieth, 2007-12-27 Plant production in hydroponics and soilless culture is rapidly expanding throughout the world raising a great interest in the scientific community For the first time in an authoritative reference book authors cover both theoretical and practical aspects of hydroponics growing plants without the use of soil This reference book covers the state of the art in this area while offering a clear view of supplying plants with nutrients other than soil Soilless Culture provides the reader with an understanding of the properties of the various soilless media and how these properties affect plant performance in relation to basic horticultural operations such as irrigation and fertilization This book is ideal for agronomists horticulturalists greenhouse and nursery managers extension specialists and people involved with the production of plants Comprehensive discussion of hydroponic systems irrigation and control measures allows readers to achieve optimal performance State of the art book on all theoretical aspects of hydroponics and soilless culture including a thorough description of the root system its functions and limitation posed by restricted root volume Critical and updated reviews of current analytical methods and how to translate their results to irrigation and fertilization practices Definitive chapters on recycled no discharge systems including salinity and nutrition management and pathogen eradication Up to date description of all important types of growing media **Achieving sustainable cultivation of vegetables** Prof. George Hochmuth, 2019-09-10 Discusses advances in research on vegetable physiology and genetics Comprehensive review of research on best practice in cultivation including soil health pest management as well as organic and protected vegetable cultivation Wide ranging coverage of key vegetables such as carrot lettuce and cabbage *Instant Insights: Vertical farming in horticulture* Prof Dickson Despommier, Emeritus Professor Toyoki Kozai, Dr Yumiko Amagai, Dr Eri Hayashi, Dr James E. Faust, Professor Dimitrios Savvas, Dr Damianos Neocleous, Dr Giuseppina Pennisi, Dr Alessandro Pistillo, Dr Elisa Appolloni, Dr Francesco Orsini, Dr Giorgio Gianquinto, 2020-12-08 This specially curated collection features five reviews of current and key research on vertical farming in horticulture The first chapter describes and evaluates technologies and methods for growing

edible plants indoors and presents a survey of selected commercial vertical farms currently operating that employ them The second chapter explores the benefits of plant factories with artificial lighting PFALs The chapter assesses resource consumption costs and performance of current PFALs as well as methods for reducing resource consumption and production costs The third chapter explores recent advances in the ornamentals industry such as vertical propagation systems and LED technology and how these can be implemented to meet the challenges of a changing marketplace and societal demands The fourth chapter describes the advantages and disadvantages of hydroponics along with the equipment and substrates used and also examines soilless hydroponic growing systems for vegetables The final chapter describes the most recent innovation in hydroponic technologies for plant cultivation within cities and their adaptability to the urban fabric
