Integrated Photonics Clifford Pollock,Michal Lipson,2013-06-29

From the beginning Integrated Photonics introduces numerical techniques for studying non analytic structures Most chapters have numerical problems designed for solution using a computational program such as Matlab or Mathematica An entire chapter is devoted to one of the numeric simulation techniques being used in optoelectronic design the Beam Propagation Method and provides opportunity for students to explore some novel optical structures without too much effort Small pieces of code are supplied where appropriate to get the reader started on the numeric work Integrated Photonics is designed for the senior first year graduate student and requires a basic familiarity with electromagnetic waves and the ability to solve differential equations with boundary conditions

The Generalized Multipole Technique for Light Scattering

Thomas Wriedt,Yuri Eremin,2018-03-09 This book presents the Generalized Multipole Technique as a fast and powerful theoretical and computation tool to simulate light scattering by nonspherical particles It also demonstrates the considerable potential of the method In recent years the concept has been applied in new fields such as simulation of electron energy loss spectroscopy and has been used to extend other methods like the null field method making it more widely applicable The authors discuss particular implementations of the GMT methods such as the Discrete Sources Method DSM Multiple Multipole Program MMP the Method of Auxiliary Sources MAS the Filamentary Current Method FCM the Method of Fictitious Sources MFS and the Null Field Method with Discrete Sources NFM DS The Generalized Multipole Technique is a

surface based method to find the solution of a boundary value problem for a given differential equation by expanding the fields in terms of fundamental or other singular solutions of this equation The amplitudes of these fundamental solutions are determined from the boundary condition at the particle surface Electromagnetic and light scattering by particles or systems of particles has been the subject of intense research in various scientific and engineering fields including astronomy optics meteorology remote sensing optical particle sizing and electromagnetics which has led to the development of a large number of modelling methods based on the Generalized Multipole Technique for quantitative evaluation of electromagnetic scattering by particles of various shapes and compositions The book describes these methods in detail Electromagnetic Waves, Materials, and Computation with MATLAB® Dikshitulu K. Kalluri, 2016-04-19 Readily available commercial software enables engineers and students to perform routine calculations and design without necessarily having a sufficient conceptual understanding of the anticipated solution The software is so user friendly that it usually produces a beautiful colored visualization of that solution often camouflaging the fact that t Principles of Electromagnetic Waves and Materials Dikshitulu K.
