***Abstract:** Creating a first year engineering unit which is stimulating, exciting, but still covers the 'raw' material required can be a difficult task. The undergraduate engineering course at Monash University includes a 'common' first year, in which students have a taste of many engineering disciplines before choosing to complete their degree in a particular field. This paper describes and assesses the methods used to re-engage with students and revitalize the unit: better use of electronic resources, regular online student assessment during semester and new laboratory experiments.*

1. Introduction

This paper presents the transformation of ENG1030: Electrical Systems, to better meet students' expectations and improve the quality of teaching. Designing a first year unit that meets the huge range of requirements is hard: Electrical engineering has in the past been considered a 'difficult' unit, and students enter the course with a range of different backgrounds. Some students will choose to pursue further studies in this field, or it may serve as a 'terminal' unit for other students who choose to study other engineering disciplines. The unit also needs to serve as something of 'sales pitch' for studies in electrical engineering: some students will be undecided on their choice of engineering specialization, and the quality of the first year unit has a direct bearing on their perception of the field.

ENG1030 had been taught in a similar manner for many years at Monash University, with 'traditional' content delivery and assessment. As part of this process of renewal, efforts were made to modernise the unit in many aspects, including creating modern and relevant laboratory experiments, embracing online teaching technologies, changing assessment to provide regular testing of students during semester, and an updating other resources to give a consistent look and re-useable high quality content in future semesters.

2. Background

There is a wealth of literature detailing the design of effective first year units and courses. The idea of Problem Based Learning (Norman & Schmidt, 1992) has been used in many courses (Steedman, Smith, Kelcher, & Martin, 2006) (Brodie & Porter, 2008) (Mantri, Dutt, Gupta, & Chitkara, 2008) as an effective way to help students come to terms with unfamiliar ideas, by allowing them to explore the concepts in a collaborative, interactive environment. (Smaill, Godfrey, & Rowe, 2007) found that students entering an first year electrical engineering course can have vastly different understandings of basic physics material.

Additionally, efforts have been made to integrate technology into classrooms and course delivery: online assessments (Deeks, 1999), effective use of online content management systems (Yench, Crosky, Wilk, & Allen, 2008) and as an aid in managing units with large enrolments (Williams & Sher, 2007). (Hadgraft, 2007) emphasises the need for more effective integration of online assessment in teaching and a better understanding of what online resources are available.

for Students The present volume being based upon courses of lectures given by me during the last few sessions to classes of
students desirous of qualifying as electrical engineers and my aim having been to treat the subject as far as possible on easy
and non mathematical lines I am hopeful that the work will prove acceptable to the numerous students who are to be found
attending evening and other courses of instruction at Polytechnics and Technical Schools To those who propose taking up the
serious study of Electrical Engineering and intend obtaining more than a surface knowledge of the subject I would strongly
advise that a concurrent course be taken in the science of Electricity and Magnetism which underlies all practical
applications to Electrical Engineering and to those whose time for study is strictly limited this science course may be found
sufficient for the first year I have avoided a mathematical treatment as far as possible and the numerical problems have not
been worked out to a greater degree of accuracy than is required for practical work In no case is an example given requiring
more mathematics than is taught in the first stage of that subject About the Publisher Forgotten Books publishes hundreds of
