Meade, 2012-12-06 Although some nations such as Japan have invested in aquaculture research and developed major aquaculture industries the opportunities for similar development in the United States remain largely unnoticed In a typical recent year the United States which claims 20% of the world's marine fisheries resources imported seafood worth 4.8 billion and exported 1.3 billion In addition to the 3.5 billion deficit in food fish was another 2.7 billion deficit for nonedible fishery products Next to oil fishery products constituted the second highest drain on the United States balance of payments and accounts for a significant portion of the foreign trade deficit Furthermore fish consumption has been increasing in North America In response to the demand for fishery products aquaculture managers not only have the opportunity to realize economic profit but in doing so can make an important contribution to reducing the national debt providing employment and enhancing our diet This book might be considered a farm management text for those in aquaculture It is intended to provide an introduction to aquaculture principles and an introduction to management including business and people management microeconomics and the concepts of efficiency and productivity I hope it will bridge the gap between conservationists the academic community and commercial culturists Abundant references should enable the reader to quickly access literature on most topics germane to the management of culture systems *Assessment of Freshwater Fish Seed Resources for Sustainable Aquaculture* Food and Agriculture Organization of the United Nations, 2007-01-01 Four of the most important resources to aquaculture outside human and technological resources are land water seed and feed Efficient use of these resources are necessary to guarantee optimum production from aquaculture A project Study and Analysis of Seed Production in Small scale Rural Aquaculture was implemented through a desk study and expert workshop held in Wuxi China from 23-26 March 2006 to assess the status of freshwater fish seed resources and supply and its contribution to sustainable aquatic production This publication is presented in two parts Part 1 contains the proceedings and major recommendations of the expert workshop which tackled three major themes a seed quality genetics technology and certification b seed networking distribution entrepreneurship and certification and c how rural fish farmers can benefit from the freshwater aquaculture seed sector Part 2 contains the detailed outcomes of the desk study consisting of three regional syntheses Africa Asia and Latin America based on 21 country case studies five thematic reviews quality genetics and breeding seed networks and entrepreneurship seed supply in rural
