the necessary elements for building a model that would explore the mutual interaction between corrosion and environment mainly by exploring the difference between environmental impact and environmental effect Chapter 7 is also very important because the four models so far applied to estimate the cost of corrosion Uhlig Method Hoar Method I O method and LCC method are not capable of suggesting any clear model or a sensible way of exploring the elements necessary to explain the impact of indirect costs of corrosion the most important of which being environmental damages imposed by corrosion This book is ideal for engineers students and managers working or studying corrosion Corrosion Policy Decision Making is also an indispensable resource for professionals in the fields of upstream and downstream on shore off shore oil and gas

Chemical Economy & Engineering Review, 1978 Oil and Governance David G. Victor, David R. Hults, Mark C. Thurber, 2011-12-08

National oil companies (NOCs) play an important role in the world economy. They produce most of the world's oil and bankroll governments across the globe. Although NOCs superficially resemble private sector companies, they often behave in very different ways. *Oil and Governance* explains the variation in performance and strategy for NOCs and provides fresh insights into the future of the oil industry as well as the politics of the oil-rich countries where NOCs dominate. It comprises fifteen case studies, each following a common research design of NOCs based in the Middle East, Africa, Asia, Latin America, and Europe. The book also includes cross-cutting pieces on the industrial structure of the oil industry and the politics and administration of NOCs. This book is the largest and most systematic analysis of NOCs to date and is suitable for audiences from industry and academia as well as policymakers.
