**Analysis of Radio Frequency Circuits** Amit Mehrotra,Alberto L. Sangiovanni-Vincentelli,2013-04-17 In this book we concentrate on developing noise simulation techniques for RF circuits The difference between our approach of performing noise analysis for RF circuits and the traditional techniques is that we first concentrate on the noise analysis for oscillators instead of non oscillatory circuits As a first step we develop a new quantitative description of the dynamics of stable nonlinear oscillators in presence of deterministic perturbations Unlike previous such attempts this description is not limited to two dimensional system of equations and does not make any assumptions about the type of nonlinearity By considering stochastic perturbations in a stochastic differential calculus setting we obtain a correct mathematical characterization of the noisy oscillator output We present efficient numerical techniques both in time domain and in frequency domain for computing the phase noise of oscillators This approach also determines the relative contribution of the device noise sources to phase noise which is very useful for oscillator design *Computational Intelligence and Bioinspired Systems* Joan Cabestany,Alberto Prieto,Francisco Sandoval,2005-06-21 We present in this volume the collection of finally accepted papers of the eighth edition of the IWANN conference International Work Conference on Artificial Neural Networks This biennial meeting focuses on the foundations theory models and applications of systems inspired by nature neural networks fuzzy logic and evolutionary systems Since the first edition of IWANN in Granada LNCS 540 1991 the Artificial Neural Network ANN community and the domain itself have matured and evolved Under the ANN banner we find a very heterogeneous scenario with a main interest and objective to better understand nature and beings for the correct elaboration of theories models and new algorithms For scientists engineers and professionals working in the area this is a very good way to get solid and competitive applications We are facing a real revolution with the emergence of embedded intelligence in many artificial systems systems covering diverse fields industry domotics leisure healthcare So we are convinced that an enormous amount of work must be and should be still done Many pieces of the puzzle must be built and placed into their proper positions offering us new and solid theories and models necessary tools for the application and praxis of these current paradigms The above mentioned concepts were the main reason for the subtitle of the IWANN 2005 edition Computational Intelligence and Bioinspired Systems The call for papers was launched several months ago addressing the following topics 1 Mathematical

and theoretical methods in computational intelligence
