Construction Materials Manual Manfred Hegger, Volker Auch-Schwelk, Matthias Fuchs, Thorsten

Rosenkranz, 2013-02-12 Until now the few existing systematic texts on construction materials have primarily been directed at building engineers. An overview for architects which also considers the importance of construction materials in the sensory perception of architecture including tactile qualities, smell, color and surface structure has not been available. With the publication of the Construction Materials Manual, all that has changed. As a basic work aimed equally at the questions and perspectives of architects and building engineers, it will bring together all of the above mentioned viewpoints. It addresses fundamental questions of sustainability including life span, environmental impact and material cycles, while also presenting material innovations. All of the principal conventional and innovative construction materials are comprehensively documented with attention to their production, manufacture, fabrication, treatment, surfaces, connections and characteristics. International examples help to illustrate their use in architecture where a building's appearance is often defined by a single material. Thus the Construction Materials Manual will support the daily work of architects and engineers in the choice of construction materials in a comprehensive and at the same time vivid and stimulating manner. **Proceedings of the 10th**
