Computer Application Engineering held 27 28 August 2013 in Hong Kong China Specific topics under consideration include Control Robotics and Automation Information Technology Intelligent Computing and Principles of Speech Coding Tokunbo Ogunfunmi,Madihally Narasimha,2010-04-29 It is becoming increasingly apparent that all forms of communication including voice will be transmitted through packet switched networks based on the Internet Protocol IP Therefore the design of modern devices that rely on speech interfaces such as cell phones and PDAs requires a complete and up to date understanding of the basics of speech **Handbook for Digital Signal Processing** Sanjit K. Sicuranza,Sanjit K. Mitra,2012-12-06 A color time varying image can be described as a three dimensional vector representing the colors in an appropriate color space defined on a three dimensional spatiotemporal space In conventional analog television a one dimensional signal suitable for transmission over a communication channel is obtained by sampling the scene in the vertical and temporal directions and by frequency multiplexing the luminance and chrominance information In digital processing and transmission systems sampling is applied in the horizontal direction too on a signal which has been already scanned in the vertical and temporal directions or directly in three dimensions when using some solid state sensor As a consequence in recent years it has been considered quite natural to assess the potential advantages arising from an entire multidimensional approach to the processing of video signals As a simple but significant example a composite color video signal such as the conventional PAL or NTSC signal possesses a three dimensional spectrum which by using suitable three dimensional filters permits horizontal sampling at a rate which is less than that required for correctly sampling the equivalent one dimensional signal More recently it has been widely recognized that the improvement of the picture quality in current and advanced television systems requires well chosen signal processing algorithms which are multidimensional in nature within the demanding constraints of a real time implementation Two-dimensional Digital Signal Processing Sanjit Kumar Mitra,Michael P.
