Lying by Approximation Vincent C. Prantil, Christopher Papadopoulos, Paul D. Gessler, 2022-06-01 In teaching an introduction to the finite element method at the undergraduate level a prudent mix of theory and applications is often sought In many cases analysts use the finite element method to perform parametric studies on potential designs to size parts weed out less desirable design scenarios and predict system behavior under load In this book we discuss common pitfalls encountered by many finite element analysts in particular students encountering the method for the first time We present a variety of simple problems in axial bending torsion and shear loading that combine the students knowledge of theoretical mechanics numerical methods and approximations particular to the finite element method itself We also present case studies in which analyses are coupled with experiments to emphasize validation illustrate where interpretations of numerical results can be misleading and what can be done to allay such tendencies Challenges in presenting the necessary mix of theory and applications in a typical undergraduate course are discussed We also discuss a list of tips and rules of thumb for applying the method in practice Table of Contents Preface Acknowledgments Guilty Until Proven Innocent Let s Get Started Where We Begin to Go Wrong It s Only a Model Wisdom Is Doing It Summary Afterword Bibliography Authors Biographies

Biomimetics, Biodesign and Bionics Amilton José Vieira Arruda, Felipe Luis Palombini, 2024-05-13 Nature is a vast source of inspiration and information for the resolution of complex problems and can influence many varieties of design Biomimetics biodesign and bionics are three branches of interdisciplinary research merging biological and applied sciences This volume collects cases that highlight recent breakthroughs in these disciplines

Biological features such as patterns shapes mechanisms colors structures and more can be analyzed organized and modeled for application in human creations Therefore design engineering and architecture projects can benefit from solutions that were already tested and verified through evolution in the natural world With the development of new technologies for the investigation simulation and testing of natural features the path from nature to product can be accelerated The cases presented in this work showcase how technological advancements are leading to improved design solutions and influencing our very comprehension of nature and its complex organization
