Comparative Health Systems Johnson, Carleen Stoskopf, Leiyu Shi, 2017-03-02 The Second Edition of Comparative Health Systems A Global Perspective offers new perspectives in health administration public health and public policy that address evidence based approaches to health system improvement systems thinking at the policy level integrated information management macro and micro innovation and systems sustainability Part I offers introduces foundational concepts including health and disease and policy and economics Two new chapters explore innovation and sustainability and the role and contributions of non governmental organizations In Part II the health systems of 19 countries are each examined in their own chapter that carefully explores the country s geography and culture the history of its health system followed by a detailed evaluation of cost quality access and innovation **Space, Time, and Medicine** Larry Dossey, 1982-04-12 What we call modern physics says something entirely new about the world and how it behaves For many years these theories have been accepted as the most accurate descriptions we have ever had about our world Nevertheless medicine has been reluctant to incorporate these ideas into itself continuing to view the body as a clockwork mechanism in which illness is caused by a breakdown of parts Drawing on his long experience in the practice of internal medicine and his knowledge of modern science Dr Dossey shows how medicine can and must be updated Discussing the new theories of Bell Godel and others he opens up startling questions for medicine Could the brain be a hologram in which every part contains the whole Why have ordinary people been able to raise and lower blood pressure at will control heart rate body temperature even one minute blood vessel in a way no one can explain What is the role of consciousness in health and illness Perhaps the most startling of Dr Dossey s discussions concerns nonlinear time There is evidence that our obsession with time and our belief that time flows a belief refuted by the new physics may profoundly affect our health Time sickness is becoming an accepted medical concept a possible cause of the greatest killer of all heart disease Dr Dossey presents remarkable clinical data showing that by changing their view of time people have been able to positively affect the course of disease Just as the clockwork picture of the universe was abandoned in the onslaught of new data our mechanistic view of health and illness will give way to new models which too will be more consistent with the true face of the universe Catalog of Copyright Entries, Third Series Library of Congress.
