Learning outcomes

After completing the worksheet you should be able to:

- demonstrate knowledge and understanding of the conditions for equilibrium under the action of forces
- sketch a triangle of forces for an object in equilibrium
- make a scale drawing of a triangle of forces and apply this to deduce the magnitude and direction of a force
- use a triangle of forces to calculate the magnitude and direction of a force.

Conditions for equilibrium

Introduction

An object is in equilibrium when the resultant force on it is zero.

The pendulum bob in Figure 1 will not stay in its current position if you remove your finger, because the tension, T , and weight, W , have a resultant force, R , that will return the string to a vertical position. (You can find more about resultant forces in '2 Calculation sheet: Using scalars and vectors'.) When the force from the finger, F , is equal and opposite to the resultant, R , then the bob is in equilibrium and the three forces, T , F , and W , form a triangle of forces.

Figure 1

If three forces are acting on an object and it is in equilibrium, then the forces will always form a closed triangle of forces.

Paul Kapur, 2007. Does the proliferation of nuclear weapons cause ongoing conflicts to diminish or to intensify? The spread of nuclear weapons to South Asia offers an opportunity to investigate this crucial question. Optimistic scholars argue that by threatening to raise the cost of war, astronomically, nuclear weapons make armed conflict in South Asia extremely unlikely. Pessimistic scholars maintain that nuclear weapons make the subcontinent war-prone because of technological, political, and organizational problems. This

book argues that nuclear weapons have destabilized the subcontinent principally because of their interaction with India and Pakistan's territorial preferences and relative military capabilities. These findings challenge both optimistic and pessimistic conventional wisdom and have implications beyond South Asia.
