Achieving sustainable production of poultry meat Volume 3 Todd

Applegate,2017-08-31 To meet growing demand the FAO has estimated that world poultry production needs to grow by 2.3% per year to 2030. Much of the increase in output already achieved has been as a result of improvements in commercial breeds combined with rearing in more intensive production systems. However, more intensive systems have increased the risk of transmission of animal diseases and zoonoses. Consumer expectations of sensory and nutritional quality have also never been higher. At the same time, consumers are more concerned about the environmental impact of poultry production as well as animal welfare. Drawing on an international range of expertise, this book reviews research on poultry health and welfare. Part 1 begins by reviewing the range of diseases and other health issues affecting poultry. It then goes on to discuss ways of preventing and managing disease, such as breeding and means of attenuating the immune system. The second part of the book discusses welfare issues, such as management of breeding flocks, housing, transport and humane slaughter techniques. **Achieving sustainable production of poultry meat Volume 3** Health and welfare will be a standard reference for poultry and food scientists in universities, government and other research centres and companies involved in poultry production. It is accompanied by two further volumes which review safety, quality and sustainability as well as poultry breeding and nutrition.

Achieving sustainable production of poultry meat Volume 3 Professor Todd J. Applegate,2017-08-31 Reviews latest research on bacterial and viral diseases affecting poultry as well as other threats such as parasites. Discusses current research on disease management, such as competitive exclusion treatments and other methods to boost immune function. Summarises advances in understanding poultry behaviour and improving flock welfare.

Animal Agriculture Fuller W. Bazer, G. Cliff Lamb, Guoyao Wu, 2019-10-25. Animal Agriculture Sustainability Challenges and Innovations discusses the land-based production of high quality protein by livestock and poultry and how it plays an important role in improving human nutrition, growth and health. With exponential growth of the global population and marked rises in meat consumption per capita, demands for animal source protein are expected to increase 72% between 2013 and 2050. This raises concerns about the sustainability and environmental impacts of animal agriculture. An attractive solution to meeting increasing needs for animal products and mitigating undesirable effects of agricultural practices is to enhance the efficiency of animal growth, reproduction and lactation. Currently, there is no resource that offers specific knowledge of both animal science and technology, including biotechnology, for the sustainability of animal agriculture for the expanding global demand of food in the face of diminishing resources. This book fills that gap, giving readers all the necessary information on important issues facing modern animal agriculture, namely its sustainability challenges and innovative solutions. Integrates new knowledge in animal breeding, biotechnology, nutrition, reproduction and management. Addresses the urgent issue of sustainability in modern animal agriculture. Provides practical solutions on how to solve the current and future problems that face animal agriculture worldwide.
