ABSTRACT

This paper deals with the dynamic buckling analysis of laminated stiffened plates subjected to impulsive in-plane loading along the edges. The modeling and the analysis is carried out using the ABAQUS/Explicit finite element software. The S4R shell element is adopted in the present analysis to model both the plate skin and stiffeners. The impulsive load of different variation and duration is applied and the buckling of the stiffened plates are examined, using the equation of motion approach. The convergence study of the present formulation is carried out first and the results are compared with the results published in the literature. The effects of loading function, loading duration, number of layers, lamination scheme, positions of the stiffeners, size of stiffeners and boundary conditions on the dynamic buckling response of the laminated composite stiffened plates are considered and the results are discussed. The dynamic buckling loads are also compared with the static buckling load and the results are reported.

Ships and Offshore Structures XIX Carlos Guedes Soares,Y. Garbatov,2015-09-03 This three volume work presents the proceedings from the 19th International Ship and Offshore Structures Congress held in Cascais Portugal on 7th to 10th September 2015 The International Ship and Offshore Structures Congress ISSC is a forum for the exchange of information by experts undertaking and applying marine structural research The aim of Advances in Fluid Mechanics and Solid Mechanics Damodar Maity,Pradeep G. Siddheshwar,Sunanda Saha,2020-03-21 This book comprises select proceedings of the 63rd Congress of the Indian Society of Theoretical and Applied Mechanics ISTAM held in Bangalore in December 2018 Latest research in computational experimental and applied mechanics is presented in the book The chapters are broadly classified into two sections i fluid mechanics and ii solid mechanics Each section covers computational and experimental studies on various contemporary topics such as aerospace dynamics and propulsion atmospheric sciences boundary layers compressible flow environmental fluid dynamics control structures fracture and crack viscoelasticity and mechanics of composites The contents of this book will serve as a useful reference to students researchers and practitioners interested in the broad field of mechanics *Handbook of Structural Life Assessment* Raouf A. Ibrahim,2017-03-29 This important self contained reference deals with structural life assessment SLA and structural health monitoring SHM in a combined form SLA periodically evaluates the state and condition of a structural system and provides recommendations for possible maintenance actions or the end of structural service life It is a diversified field and relies on the theories of fracture mechanics fatigue damage process and reliability theory For common structures their life assessment is not only governed by the theory of fracture mechanics and fatigue damage process but by other factors such as corrosion grounding and sudden collision On the other hand SHM deals with the detection prediction and location of crack development online Both SLA and SHM are combined in a unified and coherent treatment **Stability and Failure of High Performance Composite Structures** Shamsher Bahadur Singh,Sudhirkumar V. Barai,2022-07-05 This book is written to introduce the application of high performance composite materials such as fiber reinforced polymers functionally graded composites and sustainable fiber reinforced composites for development of thin walled plated structures beams girders and deck structures subjected to different kinds of loads This book also includes test cases and its validation with finite element method using general purpose commercial computer software Moreover the book also deals with design methodology of advanced composite materials based on different applications The comprehensive overview of the state of the art research on the high performance composite structures dealing with their stability response and failure characteristics will be of significant interest to scientists researchers students and engineers working in the thrust area of advanced composite structures This book is also helpful for Ph D candidates for developing their fundamental understanding on high performance composite structures and it will also appropriate for master and undergraduate level courses on design of composite structures especially for Civil Engineering
