**Data Mining** Mehmed Kantardzic, 2011-08-04 This book reviews state of the art methodologies and techniques for analyzing enormous quantities of raw data in high dimensional data spaces to extract new information for decision making The goal of this book is to provide a single introductory source organized in a systematic way in which we could direct the readers in analysis of large data sets through the explanation of basic concepts models and methodologies developed in recent decades If you are an instructor or professor and would like to obtain instructor s materials please visit <http://booksupport.wiley.com> If you are an instructor or professor and would like to obtain a solutions manual please send an email to [pressbooks@ieee.org](mailto:pressbooks@ieee.org)

**Data Mining: Concepts, Methodologies, Tools, and Applications** Management Association, Information Resources, 2012-11-30 Data mining continues to be an emerging interdisciplinary field that offers the ability to extract information from an existing data set and translate that knowledge for end users into an understandable way Data Mining Concepts Methodologies Tools and Applications is a comprehensive collection of research on the latest advancements and developments of data mining and how it fits into the current technological world

**Soft Computing for Data Mining Applications** K. R. Venugopal, K.G. Srinivasa, L. M. Patnaik, 2009-03-11 The authors have consolidated their research work in this volume titled Soft Computing for Data Mining Applications The monograph gives an insight into the research in the elds of Data Mining in combination with Soft Computing methodologies In these days the data continues to grow ponentially Much of the data is implicitly or explicitly imprecise Database discovery seeks to discover noteworthy unrecognized associations between the data items in the existing database The potential of discovery comes from the realization that alternate contexts may reveal additional valuable information The rate at which the data is stored is growing at a phenomenal rate As a result traditional adhoc mixtures of statistical techniques and data management tools are no longer adequate for analyzing this vast collection of data Several domains where large volumes of data are stored in centralized or distributed databases include applications like electronic commerce bio formatics computer security Web intelligence intelligent learning database systems nance marketing healthcare telecommunications and other elds Efficient tools and algorithms for knowledge discovery in large data sets have been devised during the recent years These methods exploit the capability of computers to search huge amounts of data in a fast and effective manner However the data to be analyzed is imprecise and affected with certainty In the case of heterogeneous data sources such as text and video the data might moreover be ambiguous and partly conflicting Besides patterns and relationships of interest are usually approximate Thus in order to make the information mining process more robust it requires tolerance toward imprecision uncertainty and exceptions

**Lecture Notes in Data Mining** Michael W. Berry, Murray Browne, 2006 The continual explosion of information technology and the need for better data collection and management methods has made data mining an even more relevant topic of study Books on data mining tend to be either broad and introductory or focus on some very specific

technical aspect of the field This book is a series of seventeen edited student authored lectures which explore in depth the core of data mining classification clustering and association rules by offering overviews that include both analysis and insight The initial chapters lay a framework of data mining techniques by explaining some of the basics such as applications of Bayes Theorem similarity measures and decision trees Before focusing on the pillars of classification clustering and association rules the book also considers alternative candidates such as point estimation and genetic algorithms The book s discussion of classification includes an introduction to decision tree algorithms rule based algorithms a popular alternative to decision trees and distance based algorithms Five of the lecture chapters are devoted to the concept of clustering or unsupervised classification The functionality of hierarchical and partitional clustering algorithms is also covered as well as the efficient and scalable clustering algorithms used in large databases The concept of association rules in terms of basic algorithms parallel and distributive algorithms and advanced measures that help determine the value of association rules are discussed The final chapter discusses algorithms for spatial data mining
