Process-Aware Information Systems Marlon Dumas, Wil M. van der Aalst, Arthur H. ter Hofstede, 2005-09-28 A unifying foundation to design and implement process-aware information systems. This publication takes on the formidable task of establishing a unifying foundation and set of common underlying principles to effectively model design and implement process-aware information systems. Authored by leading authorities and pioneers in the field, *Process-Aware Information Systems* helps readers gain a thorough understanding of major concepts, languages, and techniques for building process-aware applications, including UML and EPCs, two of the most widely used notations for business process modeling. Concrete techniques for process design and analysis, process execution standards (WfMC and BPEL), representative commercial tools (ARIS, TIBCO Staffware, and FLOWer). Each chapter begins with a description of the problem domain and then progressively unveils relevant concepts and techniques. Examples and illustrations are used

extensively to clarify and simplify complex material Each chapter ends with a set of exercises ranging from simple questions to thought provoking assignments Sample solutions for many of the exercises are available on the companion Web site Armed with a new and deeper understanding readers are better positioned to make their own contributions to the field and evaluate various approaches to a particular task or problem This publication is recommended as a textbook for graduate and advanced undergraduate students in computer science and information systems as well as for professionals involved in workflow and business process management groupware and teamwork enterprise application integration and business to business integration A Solution s Manual is available online An Instructor Support FTP site is also available *On the Move to Meaningful Internet Systems 2006: OTM 2006 Workshops* Zahir Tari,2006-10-26 This two volume set LNCS 4277 4278 constitutes the refereed proceedings of 14 international workshops held as part of OTM 2006 in Montpellier France in October November 2006 The 191 revised full papers presented were carefully reviewed and selected from a total of 493 submissions to the workshops The first volume begins with 26 additional revised short or poster papers of the OTM 2006 main conferences *Transactions on Pattern Languages of Programming I* James Noble,Ralph Johnson,2010-01-08 The Transactions on Pattern Languages of Programming subline aims to publish papers on patterns and pattern languages as applied to software design development and use throughout all phases of the software life cycle from requirements and design to implementation maintenance and evolution The primary focus of this LNCS Transactions subline is on patterns pattern collections and pattern languages themselves The journal also includes reviews survey articles criticisms of patterns and pattern languages as well as other research on patterns and pattern languages This book the first volume in the Transactions on Pattern Languages of Programming series presents eight papers that have been through a careful peer review process involving both pattern experts and domain experts by researchers and practitioners The papers cover a wide range of topics from the architectural design of large scale systems down to very detailed design for microcontroller based embedded systems The first paper presents a substantial pattern language for constructing an important part of an integrated development environment The following papers present patterns for batching requests in client server systems graceful degradation to handle errors and exceptions and accurate timing delays Two papers present related patterns that address aspects of service oriented architectures considering synchronization and workflow integration Finally the last two papers show how patterns can be combined into systems and then used to document those systems designs

Intelligent Techniques and Tools for Novel System Architectures Panagiotis Chountas, Ilias Petrounias, 2008-09-04 The purpose of this volume is to foster and present new directions and solutions in broadly perceived intelligent systems The emphasis is on constructive approaches that can be of utmost importance for a further progress and implementability The volume is focused around a crucial prerequisite for developing and implementing intelligent systems namely to computationally represent and manipulate knowledge both theory and information augmented by an ability to operationally deal with large scale knowledge bases complex forms of situation assessment sophisticated value based modes of reasoning and economic and autonomous system behaviours These challenges exceed the capabilities and performance capacity of current open standards approaches to knowledge representation management and system architectures The intention of the editors and contributors of this volume is to present tools and techniques that can help in filling this gap New system architectures must be devised in response to the needs of exhibiting intelligent behaviour cooperate with users and other systems in problem solving discovery access retrieval and manipulation of a wide variety of data and knowledge and reason under uncertainty in the context of a knowledge based economy and society **BPMN 2.0** Thomas Allweyer, 2016-05-03 BPMN

Business Process Model and Notation is the established standard for business process modeling Only a few years after its first publication it has gained widespread adoption in practice All important modeling tools support BPMN diagramming It is possible to create business oriented diagrams but also technical models for process execution in business process management systems BPMS This book provides a stepwise introduction to BPMN using many examples close to practice Starting with the basic elements for modeling sequence flow all BPMN 2.0 diagrams are presented and discussed in detail You will gain a profound understanding of the complete notation and you will be able to make correct use of the different language elements In the second edition a collection of useful modeling patterns has been added These patterns provide best practice solutions for typical problems arising in the practice of process modeling *A Rigorous Semantics for BPMN 2.0*

Process Diagrams Felix Kossak,Christa Illibauer,Verena Geist,Jan Kubovy,Christine Natschläger,Thomas Ziebermayr,Theodorich Kopetzky,Bernhard Freudenthaler,Klaus-Dieter Schewe,2015-02-04 This book provides the most complete formal specification of the semantics of the Business Process Model and Notation 2.0 standard BPMN available to date in a style that is easily understandable for a wide range of readers not only for experts in formal methods but e.g. also for developers of modeling tools software architects or graduate students specializing in business process management BPMN issued by the Object Management Group is a widely used standard for business process modeling However major drawbacks of BPMN include its limited support for organizational modeling its only implicit expression of modalities and its lack of integrated user interaction and data modeling Further in many cases the syntactical and in particular semantic definitions of BPMN are inaccurate incomplete or inconsistent The book addresses concrete issues concerning the execution semantics of business processes and provides a formal definition of BPMN process diagrams which can serve as a sound basis for further extensions i.e. in the form of horizontal refinements of the core language To this end the Abstract State Machine ASMs method is used to formalize the semantics of BPMN ASMs have demonstrated their value in various domains e.g. specifying the semantics of programming or modeling languages verifying the specification of the Java Virtual Machine or formalizing the ITIL change management process This kind of improvement promotes more consistency in the interpretation of comprehensive models as well as real exchangeability of models between different tools In the outlook at the end of the book the authors conclude with proposing extensions that address actor modeling including an intuitive way to denote permissions and obligations integration of user centric views a refined communication concept and data integration **Boost**
