With a multi-sectoral perspective grounded in Sustainable Development Goals, the text prepares students for engagement in health care and public health and goes beyond traditional global health texts to include chapters on mental health, agriculture and nutrition, water and sanitation, and climate change. In addition to presenting core concepts, the book outlines principles for practice that enable students and faculty to plan and prepare for fieldwork in global health. The book also offers perspectives from global health practitioners from a range of disciplinary and geographic perspectives. Exercises, readings, discussion guides, and information about global health competencies and careers facilitate personal discernment and enable students to systematically develop their own professional goals and strategies for enriching respectful and ethical global health engagement. Understand the essential concepts, systems, and principles of global health. Engage in up-to-date discussion of global health challenges and solutions.
