Integer Programming and Related Areas Rabe v. Randow, 2012-12-06 The fields of integer programming and combinatorial optimization continue to be areas of great vitality with an ever increasing number of publications and journals appearing A classified bibliography thus continues to be necessary and useful today even more so than it did when the project of which this is the fifth volume was started in 1970 in the Institut für Ökonometrie und Operations Research of the University of Bonn The pioneering first volume was compiled by Claus Kastning during the years 1970 1975 and appeared in 1976 as Volume 128 of the series Lecture Notes in Economics and Mathematical Systems published by the Springer Verlag Work on the project was continued by Dirk Hausmann Reinhardt Euler and Rabe von Randow and resulted in the publication of the second third and fourth volumes in 1978 1982 and 1985 Volumes 160 197 and 243 of the above series The present book constitutes the fifth volume of the bibliography and covers the period from autumn 1984 to the end of 1987 It contains 5864 new publications by 4480 authors and was compiled by Rabe von Randow Its form is practically identical to that of the first four volumes some additions having been made to the subject list

Phylogenetics Charles Semple, Mike Steel, Both in the Department of Mathematics and Statistics Mike Steel, 2003 Phylogenetics is the reconstruction and analysis of phylogenetic evolutionary trees and networks based on inherited characteristics It is a flourishing area of interreaction between mathematics statistics computer science and biology The main role of phylogenetic techniques lies in evolutionary biology where it is used to infer historical relationships between species However the methods are also relevant to a diverse range of fields including epidemiology ecology medicine as well as linguistics and cognitive psychology This graduate level book based on the authors lectures at The University of Canterbury New Zealand focuses on the mathematical aspects of phylogenetics It brings together the central results of the field providing proofs of the main theorem outlines their biological significance and indicates how algorithms may be derived The presentation is self contained and relies on discrete mathematics with some probability theory A set of exercises and at least one specialist topic ends each chapter This book is intended for biologists interested in the mathematical theory behind phylogenetic methods and for

mathematicians statisticians and computer scientists eager to learn about this emerging area of discrete mathematics

The book reviews inequalities for weighted entry sums of matrix powers Applications range from mathematics and CS to pure sciences It unifies and generalizes several results for products and powers of sesquilinear forms derived from powers of Hermitian positive semidefinite as well as nonnegative matrices It shows that some inequalities are valid only in specific cases How to translate the Hermitian matrix results into results for alternating powers of general rectangular matrices Inequalities that compare the powers of the row and column sums to the row and column sums of the matrix powers are refined for nonnegative matrices Lastly eigenvalue bounds and derive results for iterated kernels are improved

Time-Dependent Scheduling Stanislaw Gawiejnowicz,2008-09-26 Time dependent scheduling involves problems in which the processing times of jobs depend on when those jobs are started This book is a comprehensive study of complexity results and optimal and suboptimal algorithms concerning time dependent scheduling in single parallel and dedicated machine environments In addition to complexity issues and exact or heuristic algorithms which are typically presented in scheduling books the author also includes more advanced topics such as matrix methods in time dependent scheduling and time dependent scheduling with two criteria The reader should be familiar with basic notions of calculus discrete mathematics and

combinatorial optimization theory while the book offers introductory material on NP complete problems and the basics of scheduling theory The author includes numerous examples figures and tables he presents different classes of algorithms using pseudocode and he completes the book with an extensive bibliography and author symbol and subject indexes The book is suitable for researchers working on scheduling problem complexity optimization heuristics and local search algorithms

Computation, Cooperation, and Life Jozef Kelemen, Alica Kelemenová, 2011-06-21 Gheorghe P un has played an important role within a wide range of

disciplines from the foundations of traditional computation theory and formal language theory to research gaining its inspiration from living nature. He has significantly contributed to the development of these diverse fields, initiating and pioneering some of them with remarkable imaginativeness and enthusiasm. Gheorghe Păun's research focusses on systems inspired by structures and processes found in living systems, with the field of membrane computing or P systems being the most important of his initiatives. This Festschrift volume, published to honor Gheorghe Păun on the occasion of his 60th birthday, includes 16 contributions by his students and collaborators. The research presented aims to gain a better understanding of what computation is, to find better models of computation, and to look for new computing devices inspired by the structure and/or functioning of natural or societal systems. The papers are preceded by an introduction by Solomon Marcus, Gheorghe Păun's lifelong teacher and mentor, and are organized in topical sections on general computing, grammar systems, membrane systems, and inspirations from natural computing.
