The seminal reference on the care of laboratory and captive animals. The UFAW Handbook on the Care and Management of Laboratory and Other Research Animals is a must have for anyone working in this field. The UFAW Handbook has been the definitive text since 1947. Written for an international audience it contains contributions from experts from around the world. The book focuses on best practice principles throughout providing comprehensive coverage with all chapters being peer reviewed by anonymous referees. As well as addressing the husbandry of laboratory animals the content is also of great value to zoos and aquaria. Changes for the eighth edition. Revised and updated to reflect developments since publication of the previous edition. New chapters on areas of growing concern including the 3Rs, phenotyping, statistics and experimental design, welfare assessment, legislation, training of people caring for lab animals and euthanasia. All material combined into one volume for ease of reference. This book is published on behalf of UFAW, The Universities Federation for Animal Welfare, with whom we also publish the UFAW Wiley Blackwell Animal Welfare Book Series. This major series of books provides an authoritative source of information on worldwide developments, current thinking and best practice in the field of animal welfare science and technology. For details of all of the titles in the series see <http://www.wiley.com/go/uaw>

Best Practice Guidelines for the Surveys and Monitoring of Great Ape Populations, 2008. From the website: The IUCN SSC Primate Specialist Group is publishing new guidelines for surveys and monitoring of great ape populations. These guidelines address a need which has existed since great ape studies began: the challenge of collecting consistently high quality data for comparison between a wide variety of sites and often across many years. This need is driven less by academic interest than by the urgent demands of field based conservation. The maelstrom of threats which now endanger all the great apes must be addressed by immediate action on every scale: initiatives at individual sites, strategies on the regional and national level and species wide action plans and international accords. All of these efforts must be founded on accurate field data and to fully understand the impact of specific threats and to measure if conservation programs are succeeding it is essential to have baseline density estimates and sustained monitoring of great ape populations. The newest publication in the Best Practice series outlines current approaches to these issues offering guidance and perspective on choices that must be made by wildlife biologists, site managers, government agencies and the conservation community at large. This report provides an overview of the variety of survey methodologies that have been developed as well as a decision tree to help select the approach that is best for a particular site or situation depending on available resources. As a continuation of this report a series of modules will be made available online which will present detailed information on survey design, field techniques, analytical approaches and practical issues such as logistics, finance and standardized reporting. These new IUCN guidelines will help researchers to standardize their data collection and just as importantly will allow for improved comparisons.

between datasets This will complement the A P E S database <http://apes.eva.mpg.de> which is intended to serve as a repository for survey data on great apes and to analyze trends in their populations These survey and monitoring guidelines combined with resources available via A P E S are important steps towards a comprehensive understanding of the conservation status of great apes at both the population and species level Animal Behavior Victor S.
